

Errata

Title & Document Type: 8011A Pulse Generator, Operation & Service Manual

Manual Part Number: 08011-90004

Revision Date: 1990

HP References in this Manual

This manual may contain references to HP or Hewlett-Packard. Please note that Hewlett-Packard's former test and measurement, semiconductor products and chemical analysis businesses are now part of Agilent Technologies. We have made no changes to this manual copy. The HP XXXX referred to in this document is now the Agilent XXXX. For example, model number HP8648A is now model number Agilent 8648A.

About this Manual

We've added this manual to the Agilent website in an effort to help you support your product. This manual provides the best information we could find. It may be incomplete or contain dated information, and the scan quality may not be ideal. If we find a better copy in the future, we will add it to the Agilent website.

Support for Your Product

Agilent no longer sells or supports this product. You will find any other available product information on the Agilent Test & Measurement website:

www.tm.agilent.com

Search for the model number of this product, and the resulting product page will guide you to any available information. Our service centers may be able to perform calibration if no repair parts are needed, but no other support from Agilent is available.

OPERATING AND SERVICE MANUAL

8011A PULSE GENERATOR

HEWLETT **hp** PACKARD

CERTIFICATION

The Hewlett-Packard Company certifies that this instrument was thoroughly tested and inspected and found to meet its published specifications when it was shipped from the factory. The Hewlett-Packard Company further certifies that its calibration measurements are traceable to the U.S. National Bureau of Standards to the extent allowed by the Bureau's calibration facilities, or to the calibration facilities of other International Standards Organization members.

WARRANTY AND ASSISTANCE

This Hewlett-Packard product is warranted against defects in materials and workmanship. This warranty applies for one year from the date of delivery. Hewlett-Packard will repair or replace products which prove to be defective during the warranty period provided they are returned to Hewlett-Packard. No other warranty is expressed or implied. We are not liable for consequential damages.

Service contracts or customer assistance agreements are available for Hewlett-Packard products that require maintenance and repair on-site.

For any assistance, contact your nearest Hewlett-Packard Sales and Service Office. Addresses are provided at the back of this manual.

OPERATING AND SERVICE MANUAL

8011 A PULSE GENERATOR

SERIAL NUMBERS

This manual applies directly to instruments with serial number 1411 G 01136 and higher. Any changes made in instruments having serial numbers higher than the above number will be found in a "Manual Changes" supplement (yellow pages) supplied with this manual. Be sure to examine this supplement for any changes which apply to your instrument and record these changes in the manual.

SAFETY SUMMARY

The following general safety precautions must be observed during all phases of operation, service, and repair of this instrument. Failure to comply with these precautions or with specific warnings elsewhere in this manual violates safety standards of design, manufacture, and intended use of the instrument. Hewlett-Packard Company assumes no liability for the customer's failure to comply with these requirements.

GENERAL — This is a Safety Class I instrument (provided with terminal for protective earthing) and has been manufactured and tested according to international safety standards.

OPERATION — BEFORE APPLYING POWER
comply with the installation section. Additionally, the following shall be observed:

Do not remove instrument covers when operating.

Any interruption of the protective (grounding) conductor (inside or outside the instrument) or disconnecting the protective earth terminal is likely to make this instrument dangerous. Intentional interruption is prohibited.

Whenever it is likely that the protection has been impaired, the instrument must be made inoperative and be secured against any unintended operation.

Make sure that only fuses with the required rated current and of the specified type (normal blow, time delay, etc.) are used for replacement. The use of repaired fuses and the short-circuiting of fuseholders must be avoided.

Adjustments described in the manual are performed with power supplied to the instrument while protective covers are removed. Energy available at many points may, if contacted, result in personal injury.

Any adjustment, maintenance, and repair of the opened instrument under voltage should be avoided as much as possible, and when inevitable, should be carried out only by a skilled person who is aware of the hazard involved. Do not attempt internal service or adjustment unless another person, capable of rendering first aid and resuscitation is present. Do not replace components with power cable connected.

Do not operate the instrument in the presence of flammable gases or fumes. Operation of any electrical instrument in such an environment constitutes a definite safety hazard.

Do not install substitute parts or perform any unauthorized modification to the instrument.

Capacitors inside the instrument may still be charged even if the instrument has been disconnected from its source of supply.

SAFETY SYMBOLS

The apparatus will be marked with this symbol when it is necessary for the user to refer to the instruction manual in order to protect the apparatus against damage.

Indicates dangerous voltages.

Earth terminal (sometimes used in manual to indicate circuit common connected to grounded chassis).

WARNING

The WARNING sign denotes a hazard. It calls attention to a procedure, practice or the like, which, if not correctly performed or adhered to, could result in injury or loss of life. Do not proceed beyond a WARNING sign until the indicated conditions are fully understood and met.

CAUTION

The CAUTION sign denotes a hazard. It calls attention to an operating procedure, practice, or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of part or all of the equipment. Do not proceed beyond a CAUTION sign until the indicated conditions are fully understood and met.

WARNING

Dangerous voltages, capable of causing death, are present in this instrument.
Use extreme caution when handling, testing, and adjusting.

1-1 DESCRIPTION

1-2 The Hewlett-Packard Model 8011A is a 20 MHz pulse source that can be externally and manually triggered. Ease of operation is ensured by logically arranged and clearly identified controls.

1-3 Pulse amplitudes up to 16V and selectable output format ensure compatibility with most logic families powered from either positive or negative supplies, and using either positive or negative logic conventions. Pulse width is continuously variable from 25ns to 100ms, or can be 50% of pulse period by selecting square wave mode.

1-4 Variable pulse width or square wave operation with up to 16V amplitude and the ability to pro-

duce positive, negative or symmetrical pulses in positive or negative logic make the instrument suitable for driving TTL, DTL, RTL, HTL and CMOS as well as discrete logic and linear circuits.

1-5 Serviceability is enhanced by using high quality components, and stable circuits reduce calibration adjustments to a minimum.

1-6 PULSE BURST OPTION 001

1-7 Thumbwheel switches on the front panel permit any number of pulses between 1 and 9999 to be preset. A "burst" starts on receipt of an electrical or manual trigger and ceases when the set number of pulses has been generated.

Table 1-1. Specifications

PULSE CHARACTERISTICS

(50 ohm source and load impedances)

Transition times: $< 10\text{ns}$ fixed.

Overshoot, ringing and preshoot: $< \pm 5\%$ of pulse amplitude. May increase to 10% at counter-clockwise positions of amplitude vernier.

Pulse width: 25ns to 100ms in four ranges. Vernier provides continuous adjustment within each range.

Width jitter: $< 0.1\% + 50\text{ps}$ for any width setting.

Maximum duty cycle: $> 50\%$ (100% using pulse complement).

Maximum output: 16V, with internal 50 ohms and external high impedance load or, with internal high impedance and external 50 Ω . 8V with 50 Ω source and load impedances.

Attenuator: three step attenuator provides the ranges 0.25V – 1V – 4V – 16V. Vernier provides continuous adjustment within each range.

Source impedance: 0.25V – 1V – 4V ranges, 50 ohms $\pm 10\%$ shunted by 30pF. 4V–16V range, 50 ohms $\pm 10\%$ or high impedance switch selectable.

Polarity: positive, negative or symmetrical switch selectable.

Format: normal or complement switch selectable.

REPETITION RATE AND TRIGGER

Repetition rate: 0.1 Hz to 20 MHz.

Period Jitter: $< 0.1\% + 50\text{ps}$ for any period setting.

Square wave: 0.05 Hz to 10 MHz.

Trigger output: dc coupled 50 ohm (typ) source delivering $\geq +1\text{V}$ across 50 ohm load.

Trigger pulse width: 20ns $\pm 10\text{ns}$.

EXTERNALLY CONTROLLED OPERATION

External Input

Input impedance: 50 ohms $\pm 10\%$

Maximum input: $\pm 5\text{V}$

Trigger polarity: positive.

Table 1-1. Specifications (cont'd)

Sensitivity: 1V

Manual: front panel pushbutton for generating single pulse.

External Triggering

Repetition rate: 0 to 20 MHz. In square wave, output frequency is half input frequency.

Trigger source: manual or external signal. Min external signal width, 10ns.

Burst mode (optional): preselected number of pulses generated on receipt of trigger.

Burst trigger source: external signal or manual. Min external signal width, 25ns.

GENERAL

Operating temperature: 0°C to 55°C

Power: 100V, 120V, 220V or 240V, +5% -10%. 48 Hz to 440 Hz, 70 VA max.

Weight: net 4 kg (9 lbs), shipping 6.5 kg (14.6 lbs).

Dimensions: 200mm wide, 142mm high, 300mm deep (7.9 in. x 5.6 in. x 11.8 in.).

Figure 2-1. 8011A and Delivered Accessories

2-1 GENERAL

2-2 Initial Inspection

2-3 Inspect the instrument and accessories for physical damage and if damage is evident refer to paragraph 2-14 for the recommended claim procedure and repacking information.

2-4 The 8011A is supplied with the following items:

Description	HP Part Number
300mA fuse (for 220/240V operation)	2110-0044
600mA fuse (for 110/120V operation)	2110-0016
Power Cord (one of those shown in figure 2-2).	

Figure 2-2. Power Cords

2-5 INSTALLATION

CAUTION

Before applying power to the instrument, check that the 8011A is set in accordance with local supply conditions. To gain access to the voltage selector switches and fuse holder remove cover adjacent to the LINE switch.

2-6 Power Source Requirements

2-7 The model 8011A will operate from nominal ac line supplies of 100V, 120V, 220V, or 240V (-10%, +5%) at 48 Hz to 440 Hz. Two internally mounted switches allow one of the four voltages to be selected.

Figure 2-3. Switch Settings for the Various Nominal Powerline Voltages. The power dissipation is 70VA maximum.

2-8 To check the power requirements proceed as follows:

Disconnect the power cable.
Remove the fuse and check its value:
for 230V operation 300mA
for 115V operation 600mA

Check that the line selector switch position corresponds to the local supply voltage. If they do not correspond use a screwdriver to change the switch positions.

Insert the correct fuse into the fuse-holder.

Connect the power cable to the rear connector.

2-9 Power Cord

2-10 The 3-wire power cable supplied with the 8011A when connected to the appropriate power outlet, grounds the instrument cabinet and panels. To preserve this safety feature when operating the instrument from an outlet without a ground connection use an appropriate adapter and connect the ground lead (green/yellow) to an external ground.

2-11 If the plug on the cable does not fit your power outlet then cut the cable at the plug end and connect a suitable plug. The plug should meet local safety requirements and include the following features:

- Minimum current rating of 1A.
- Ground connection
- Cable clamp

The colour coding used in the cable will depend on the cable supplied (see Figure 2-2 above).

2-12 Temperature Requirements

2-13 The model 8011A operates within specifications when the ambient temperature is between 0°C (32°F) and 55°C (131°F). The pulse generator may be stored between -40°C (-40°F) and 75°C (167°F).

2-14 CLAIMS AND REPACKAGING

2-15 Claims for Damage

2-16 If physical damage is evident or if the instrument does not meet specifications when received,

notify the carrier and the nearest Hewlett-Packard Sales/Service Office. The Sales/Service Office will arrange for repair or replacement of the unit without waiting for settlement of the claim against the carrier.

2-17 Repackaging for Shipment and Storage

2-18 If the instrument is to be shipped to a Hewlett-Packard Sales/Service Office, attach a tag showing owner, address, model and serial number and the repair required. The original shipping carton and packing material may be re-usable but the Hewlett-Packard Sales/Service Office will also provide information and recommendations on materials to be used if the original packing is not available or re-usable.

2-19 RACK MOUNTING

2-20 To rack mount model 8011A, order model 15179A Adapter for rackmounting 2 units

- 1 SINGLE PULSE: push-button for manually generating a single pulse in the EXTERNAL and Burst modes.
- 2 PULSE PERIOD: mutually exclusive push-buttons for selecting the range of pulse rate in the internal mode of operation. When EXT is selected rate controls are disabled.
- 3 Rate VERNIER: for continuous adjustment of the repetition rate between the limits of the range selected. Clockwise rotation increases the pulse period (i.e. reduces the rate).
- 4 PULSE WIDTH: mutually exclusive push-buttons for selecting pulse width range.
- 5 Pulse Width VERNIER: for continuous adjustment of pulse width between the limits of the range selected (is inoperative in SQUARE WAVE).
- 6 AMPLITUDE: mutually-exclusive push-buttons for selecting amplitude range. Note that, in the 4–16 Volt range the maximum current available is 320mA (from a current source) and in the other ranges the source impedance is 50Ω.
- 7 Amplitude VERNIER: for continuous adjustment of the amplitude between the limits of the range selected.
- 8 INT LOAD: push-button switch for connecting (pressed) and disconnecting (released) the 50Ω internal load in the 4–16 Volt range. In the other ranges the 50Ω load is always connected.
- 9 NEG: push-button for selecting negative polarity output.
- 10 SYM: push-button for selecting an output which is symmetrical about zero volt.

- 11 POS: push-button for selecting positive polarity output.
- 12 COMPL: push-button for selecting the pulse complement of the set pulse.

- 13 OUTPUT: BNC connector, 50Ω source (or, on 4–16 Volt range, current source if INT LOAD is released).
- 14 TRIGGER OUTPUT (+): BNC connector, positive trigger pulses from internal rate generator.
- 15 TRIGGER INPUT (+): BNC connector, to which external input signal is applied in EXTERNAL mode and Burst mode. Maximum input signal +5V.
- 16 LINE ON–OFF: press-for-on-press-for-off switch.

OPTION 001

- 17 SINGLE BURST: push-button for initiating a pulse burst.
- 18 BURST: push-button switch for selecting pulse burst mode.
- 19 NUMBER OF PULSES: thumbwheel switches on which the required number of pulses in a burst is set.

Figure 3–1. Controls and Connectors

OPERATING INSTRUCTIONS

3-1 GENERAL

3-2 The following instructions apply to model 8011A—Option 001. For the standard model, the instructions 3-7 and 3-8 for burst operation should be ignored.

3-3 MODES OF OPERATION

3-4 Internal

In this mode the 8011A requires no external signal to produce an output. Figure 3-2 shows the control which are effective in this mode.

Figure 3-2. 8011A Internal Mode

3-5 External

3-6 In EXT 2 mode the repetition rate generator is externally triggered by a signal applied to the TRIGGER INPUT 15 or manually by means of the SINGLE PULSE push button 1. Figure 3-3 shows the controls which are effective in this mode.

Figure 3-3. 8011A External Mode

Figure 3-4 illustrates the timing sequence between the trigger input and trigger and pulse outputs. Note that in SQUARE WAVE the trigger output frequency is half that of the external input.

Figure 3-4. External Triggering Timing Sequence

3-7 Burst Mode

3-8 To operate the generator in BURST Mode press the BURST push-button 18, set the required NUMBER OF PULSES on the thumbwheel switches 19 and set the pulse parameters (rate, width, etc) on the front panel. A burst is started by pressing the SINGLE BURST button 17 or by applying a signal to the TRIGGER INPUT 15. At the end of a burst, single pulses can be added by pressing the SINGLE PULSE button. Figure 3-5 shows the controls which are effective in this mode and figure 3-6 illustrates examples or repetitive and single burst output.

Figure 4-1. 8011A Block Diagram

PULSE SHAPING

4-1 INTRODUCTION (figure 4-1)

4-2 In normal mode operation, the rate generator is free-running at a rate determined by the PULSE PERIOD controls. In the external mode the disabled rate generator is turned on and off by the signal applied to the TRIGGER INPUT connector. The pulse generator can also be manually triggered by means of the SINGLE PULSE button which gives stimulus to the pulse shaping circuits via a flip-flop. When the 8011A has the Burst Option (001) the rate generator can be turned on by an external signal and turned off after a predetermined number of pulses have been generated.

4-3 In all modes of operation the pulse shaping circuits define the width (or square wave) and whether the normal or complement of the signal is to be used to drive the output stages. The conditioned signals (A,B,C

and D) are selected by a series of OR gates. Symmetry and polarity control and baseline correction take place in the output stage.

4-4 The trigger amplifier is driven by either signal A, which is the rate signal via an inverter in pulse width mode, or by signal C, which is the Q output from the divider squarer flip-flop in square wave mode.

4-5 RATE GENERATOR (Figure 4-2 and Diagram 1)

4-6 In the internal mode of operation the rate generator is free running and produces spikes at a rate determined by a multivibrator under the control of the PULSE PERIOD switch and RATE vernier. Under no-signal conditions in EXT mode, the rate generator is disabled. The pulse rate is then dependent on the frequency of the input signal which turns the multivibrator on and off.

Figure 4-2. Repetition Rate Generator

4-7 The rate generator is a Schmitt trigger (Q5 and Q6) which switches when the voltage output of a ramp generator (Q9, vernier R1 and one or more of the range capacitors C7 to C10) reaches its threshold level. When switched it activates a switch (Q8) which rapidly discharges the ramp capacitor(s), causing the voltage to fall and reset the Schmitt trigger. This turns the switch off and the cycle repeats. Each time Q5 is turned off, a positive spike appears at differentiator (L1R31).

4-8 In the slowest rep rate range the available ramp current is reduced in order to prolong the charge cycle. That is, the capacitance of C10 is effectively increased during the charge cycle by "bleeding-off" the ramp current and thus increasing the time taken to charge the capacitor. For this purpose, a time base amplifier (U1) is connected in parallel with C10. This results in a division and reduction of the ramp current by an amount proportional to that drawn by the amplifier.

4-9 When the 0.2s - 10s range switch is closed, the voltage across the ramp capacitors C7 and C10 is amplified by a linear amplifier (U1 - A). The resulting signal, which is differentiated by C11, activates an operational amplifier (U1 - B) in order to equalize the IR drop across R29 with R30.

4-10 During the discharge cycle, the operational amplifier is disabled by the forward biased diode CR26 and the ramp capacitors are rapidly discharged.

4-11 The external input circuit comprises a Schmitt trigger (Q1 and Q2) a current source (Q3) and an inverter (Q7). Q4 maintains a constant voltage at the base of Q2 in spite of the changes in the supply caused by format selection. Refer to paragraph 4-27 for information concerning the power supplies.

4-12 The leading edge of a positive signal applied to the TRIGGER INPUT turns Q1 on, Q7 on and Q5 off. Each time Q5 is turned off, a positive spike appears at the differentiator (L1/R31).

4-13 When the EXT mode is selected, the Schmitt trigger (Q5/Q6) is disabled. Each time the SINGLE PULSE push button is depressed, a flip-flop (Q13/Q14) rapidly turns on and then off. Each time the flip-flop is turned on, a positive spike appears at the differentiator (L1/R31).

4-14 In all modes of operation, the phase splitter (Q15/Q16) is turned on and off by the positive spikes applied to the base of Q15. When on, it produces a positive pulse to drive the width circuit and a negative pulse which is applied to the burst counter (when fitted).

4-15 WIDTH GENERATOR (Figure 4-3 and Diagram 2)

Figure 4-3. Width Generator

4-16 In the normal mode, the pulse leading edge occurs when Q17 turns on and Q18 off. The pulse width is determined by the time taken for the selected range capacitor (C20 and C21 or C22 or C23), charged from the variable current source (Q20/vernier R2), to reach the threshold level of the Schmitt trigger. The pulse trailing edge is created when the Schmitt trigger switches and turns on the discharge switch (Q19).

4-17 In selecting SQUARE WAVE, the width vernier (R2) is shorted and the narrowest pulse width range is automatically selected. This is in order to deliver a pulse of constant width to a divider-squarer flip-flop which generates the square wave.

Figure 4-4. Output Stages

4-18 The Schmitt trigger output is applied directly (signal B) and via an inverter (U2 — signal A) and via the divider squarer (signals C and D) to an array of gates which select the required output as follows:

	Output Format	Mode	
		Pulse	Square Wave
Normal	Positive	B	D
	Symmetrical	B	D
	Negative	A	C
Complement	Positive	A	C
	Symmetrical	A	C
	Negative	B	D

4-19 OUTPUT STAGES (Figure 4-4 and Diagrams 2 and 3)

4-20 Trigger Output Stage (Q35, Q36)

4-21 This is an ac-coupled cascode amplifier which produces a positive output pulse for each input pulse.

4-22 Pulse Output Stage

4-23 The function of the pulse output stage is to amplify the selected input signal, to supply the voltages for base line and polarity selection and attenuate the signal voltage to the required output level. The 50Ω internal load is always connected in the lower ranges but may be switched out in the 4-16 Volt range.

4-24 When POS output is selected, a positive current source (Q31, Q34) drives the output amplifier output above zero volts. For NEG outputs, a negative current source is enabled. Both current sources are disabled when SYMMetrical outputs are selected. The potentiometers R81 and R84 are used for positive (R81) and negative (R84) base line calibration.

4-25 Attenuator

4-26 The output attenuator comprises two resistive networks which provide stepped attenuation of the output. A bridged-T vernier provides continuous overlapping adjustment between the settings of the output attenuator. The internal 50Ω-load can be disconnected in the 4-16 Volt range when the INT LOAD button is released.

4-27 POWER SUPPLY (Figure 4-5 and Diagram 4)

4-28 The positive and negative power supplies are identical monolithic voltage regulators (U5 and U6) with external PNP pass transistors (Q37 and Q38). The nominal output voltage with respect to the isolated PC board returns is $\pm 14V$. The voltage levels with respect to zero volts, however, are dependent on the polarity and format switches:

POS switch closed +22.3V/-5.7V
NEG switch closed -22.3V/+5.7V
SYMM switch closed $\pm 14V$.

Figure 4-5. Voltage Regulator

4-29 A portion of the output voltage developed across the potential divider (R127, R129) is applied to an error amplifier which compares this with an internally developed reference voltage. If the difference between these voltages varies, the amplifier varies the base voltage of a series pass transistor which regulates the flow through Q37. Current limiting is accomplished by sensing the voltage drop across R123 by means of a current limiting device.

4-30 8011A Option 001 – Pulse Burst (Figure 4-6 and Diagram 5)

4-31 The Burst Control essentially consists of a counter which is loaded with numbers from front panel thumbwheel switches. When a burst is started, pulses from the rate generator decrement the counter until it is empty. This condition (all zeroes) is detected and generates a BURST COMPLETE signal which disables the rate generator.

4-32 The following description, in conjunction with figure 4-6, divides the burst operation into four successive stages:

1. Loading the Burst Counter
2. Start Burst
3. Zero Detection
4. Burst Complete

4-33 Loading the Burst Counter

4-34 When BURST mode is selected, the BURST ENABLE line goes high (0V) and 'clears' U19 (via Q7, C6, U13, U12), setting the Q output low. A low on this output then enables data to be loaded from the thumbwheel switches into the counter.

As data is being loaded, a comparator (U1, U2, U7 and U8) checks for equivalence between the counter inputs and outputs. When equivalence is detected, input pin 11 of U12d goes high, and the LOAD line (from output pin 13 of U12d) goes low thus preventing further loading of the counter.

4-35 Throughout this load process, the high on the $\bar{Q}$ output of U19 disables the repetition rate generator (via AND gate CR11, CR12 and OR gate Q3), and therefore prevents the counter from counting.

4-36 Start Burst

4-37 When the START BURST signal is received, U19 is 'preset' (via NAND gate Q5, Q6) causing the Q and $\bar{Q}$ outputs to change state. The low on the $\bar{Q}$ output starts the repetition rate generator, and the counter begins to count down from the preset number. The high on the Q output of U19 ensures that the LOAD line remains disabled, thus preventing a re-load of the counter (e.g. by thumbwheel switch change) before the end of the burst.

4-38 Zero Detection

4-39 Throughout the count-down process, all outputs of the counter are monitored by two 'zero detect' configurations, one consisting of U9 and U11, and the other consisting of U9 and CR2→CR10. The significance of the two configurations is explained in the following Burst Complete description.

4-40 Burst Complete

4-41 When the counter reaches the 'all zero' condition, the fast 'zero detect' circuit (U9, CR2 → CR10) generates a BURST COMPLETE signal, which disables the repetition rate generator via OR gate Q2, Q3. This fast zero detection is achieved by using a 'hot carrier' diode for CR10, which monitors the final zero state, C1, of the counter. Fast detection then ensures that the repetition rate generator is switched off after the correct number of pulses have been output.

4-42 The other 'zero detect' circuit (U9, U11) clears U19, setting the Q output low again, and thus allowing the counter to be loaded once more from the thumbwheel switches.

Figure 4–6. Pulse Burst Control

5-1 INTRODUCTION

5-2 The Model 8011A contains reliable components mounted on gold plated PC boards. These are subjected to a series of tests and calibration procedures which ensure accuracy and long life. In addition, maintenance and servicing is made easy by a non-complicated design and a simple "all on one board" construction.

5-3 Preventive Maintenance

5-4 The inherent reliability and accuracy of the pulse generator can be maintained by periodic cleaning and mechanical inspections. To gain access to the interior of the instrument remove the two panel covers. These are removed by releasing the four screws in the respective cover and sliding it away from the side of the instrument.

5-5 Remove dust from the interior and check that all fittings, connectors and boards are firmly in place. Check that the wiring and cables — especially those of power supply and line voltage — are in good condition. Ensure correct function of the controls by checking that the switch push rods and vernier knobs are able to move freely.

5-6 SERVICING

5-7 The following service information is only for servicing down to component level. When servicing the 8011A, if a fault cannot be localised within two hours, the complete instrument should be sent to the nearest repair centre.

NOTE: There is no board-exchange program for the 8011A.

5-8 Removal of Assemblies

5-9 The PC board should only be removed in extreme circumstances e.g. burnt board.

If necessary, however, the board can be removed as follows:

1. Remove AMPLITUDE vernier knob.
2. Remove the four screws that fix the rear panel to the frame.
3. Unsolder the TRIGGER IN cable, the TRIGGER OUT cable and the OUTPUT cable.
4. Unsolder WIDTH and RATE vernier cables.
5. Pull the 'rear panel/board' assembly out of the frame.
6. Unsolder transformer wires, power switch cables and power lamp cables.
7. Remove the two heat-sink screws from the rear panel.

5-10 Performance Checks and Adjustment Procedures

5-11 After completion of a repair or periodic inspection, verify that the instrument is working to specification by carrying out the performance checks (Table 5-2 to 5-17). Rigid observance to the sequence in which the checks appear is unnecessary. Table 5-18 and 5-19 give the procedures for checking and adjusting the power supplies and pulse base line.

5-12 Troubleshooting

5-13 When a fault symptom is evident, try to locate the fault to a functional block using figure 4-1. Then use table 5-21, the first page of which will indicate the direction in which troubleshooting is to proceed. The most convenient test point for the waveforms and voltages presented in the table can be located on figure 5-1.

Table 5-1. Test Equipment and Accessories Required

INSTRUMENT	BRIEF SPECIFICATION	RECOMMENDED MODEL
Oscilloscope	Dual Channel, 50 MHz bandwidth, sweep speeds 0.1 μ s/div. to 2 s/div. with sweep delay, 10mV/div. to 10 V/div. sensitivity.	HP 180C with plug-ins 1801A and 1821A
Sampling Oscilloscope	Dual Channel, 1 GHz bandwidth, 10mV/div. to 0.2 V/div. sensitivity, sweep speeds 1ns/div. to 10ms/div.	HP 180C with plug-ins 1810A
Counter	Frequency Range 0 to > 20 MHz	HP 5245L
VHF Test Oscillator	Frequency Range > 20 MHz	HP 3200B
Test Oscillator	Frequency Range 10 Hz to 10 MHz	HP 651B
Pulse Source	Frequency Range up to 20 MHz	HP 8011A
Digital Voltmeter	Sensitivity 0.1 V to 100 V	HP 34740A with plug-on HP 34702A
AC Voltmeter	Sensitivity 0.1 mV to 100mV	HP 3400A

ACCESSORIES	RECOMMENDED MODEL
50 Ω cable assy 23 cm long with BNC male connectors	HP 10502A
50 Ω cable assy 122 cm long with BNC male connectors (4 required)	HP 10503A
Test leads for DVM-dual banana plug to probe and clip	HP 110J3A
20 dB 20 W power attenuator	HP 8491A
Connector BNC male to type N female	HP 1250-0077
Connector type N male to BNC male	HP 1250-0780
Tee connector, BNC	HP 1250-0781
50 Ω feed-through termination (2 required)	HP 11048C
50 Ω adder/splitter	HP 15104A

Table 5-2. Performance Check — Repetition Rate

INITIAL CONTROL SETTINGS

PULSE PERIOD 2	50n — 2 μ
VERNIER 3	CCW
PULSE WIDTH 4	25n — 1 μ
VERNIER 5	CCW
AMPLITUDE 6	4 — 16
VERNIER 7	CW
POLARITY 11	POS
INT LOAD 8	ON

STEP	INSTRUCTION		RESULT
1	Check the repetition rate for each setting of the controls listed below.		
	PULSE PERIOD 2	VERNIER 3	
	50n — 2 μ	CCW	>20MHz
		CW	<500kHz
	2 μ — 0.1m	CCW	>500kHz
		CW	<10kHz
	0.1m — 5m	CCW	>10kHz
		CW	<200Hz
2	For the following ranges set the counter for period measurement:		
	5m — 0.2	CCW	<5ms
		CW	>200ms
	0.2 — 10	CCW	<200ms
		CW	>10s.

Table 5-3. Performance Check — Manual Trigger

STEP	INSTRUCTION	RESULT
1	Set the counter for manual start.	
2	Press the SINGLE PULSE button once only:	1 pulse

Table 5-4. Performance Check — Square Wave

STEP	INSTRUCTION	RESULTS
1	Set the counter function to measure frequency.	
2	Check the square wave pulse for each control setting listed below:	
	PULSE PERIOD 2	
	50n – 2μ	> 10 MHz
	2μ – 0.1m	> 250 kHz
	0.1m – 5m	> 5 kHz
3	Set counter function to period average	
	5m – 0.2	< 10ms
	0.2 – 10	< 400ms

Table 5-5. Performance Check — Single Burst (8011A — Opt. 001)

INITIAL CONTROL SETTINGS

PULSE PERIOD	2	50n — 2μ

STEP INSTRUCTIONS

RESULTS

1 Press SINGLE BURST button:

8011 pulses

Table 5-6. Performance Check — Pulse Width

INITIAL CONTROL SETTINGS

PULSE PERIOD 2 $50\text{n} - 2\mu$
 VERNIER 3 CCW
 PULSE WIDTH 4 $25\text{n} - 1\mu$
 VERNIER 5 CCW
 AMPLITUDE 6 4 - 16
 VERNIER 7 CW
 POLARITY 11 POS
 INT LOAD 8 ON

STEP INSTRUCTION

RESULTS

- 1 Check the pulse width for each of the control settings listed below.

PULSE PERIOD 2	VERNIER 3	PULSE WIDTH 4	VERNIER 5	
$50\text{n} - 2\mu$	CCW	$25\text{n} - 1\mu$	CCW	$< 25\text{ns}$
$2\mu - .1\text{m}$	CCW	$1\mu - 50\mu$	CCW	$< 1\mu$
$.1\text{m} - 5\text{m}$	CCW	$50\mu - 2.5\text{m}$	CCW	$< 50\mu$
$5\text{m} - .2$	CCW	$2.5\text{m} - .1$	CCW	$< 2.5\text{m}$
	CW		CW	$> .1\text{s}$

CAUTION

Output power when 4-16 V range selected can destroy scope's internal 50 ohm load. Use a 20 dB power attenuator.

Table 5-7. Performance Check — Duty Cycle

INITIAL CONTROL SETTINGS

PULSE PERIOD 2	50n-2μ
VERNIER 3	CW
PULSE WIDTH 4	1μ - 5μ
VERNIER 5	CCW
AMPLITUDE 6	4 - 16
VERNIER 7	CW
POLARITY 11	POS
INT LOAD 8	ON

STEP	INSTRUCTIONS	RESULTS
1	By means of the pulse width VERNIER 5. Set the pulse leading edge on the first line of the oscilloscope screen and the trailing edge on the centre line (5 cm).	
2	Turn the pulse period VERNIER 3 slowly CCW until the trailing edge moves and/or the pulse is divided.	
3	Measure the distance between the both pulse leading edges for each setting of the controls listed below:	

PULSE PERIOD 2	PULSE WIDTH 4	VERNIER 5	Divisions
50n - 2μ	1μ - 50μ	as in	< 10 = > 50%
2μ - 0.1m	50μ - 2.5m	step 1	< 10 = > 50%
0.1m - 5m	2.5m - 0.1		< 10 = > 50%

Duty cycle formula is $\frac{t_{on} \times 100}{t \text{ (period)}} \% = \% \text{ Duty Cycle}$

Table 5-8. Performance Check — Pulse Period Jitter

INITIAL CONTROL SETTINGS

PULSE PERIOD	2	0.1m – 5m
VERNIER	3	see below
PULSE WIDTH	4	50 μ – 2.5m
VERNIER	5	CCW
AMPLITUDE	6	4 – 16
VERNIER	7	CW
POLARITY	11	POS
INT LOAD	8	

STEP INSTRUCTIONS

RESULTS

- 1 Main Sweep .1ms/div
Delayed Sweep 10 μ s/div
Sweep Display MAIN
Magnifier X 1
- 2 Adjust the pulse period VERNIER (3) to obtain a 1ms pulse period.
- 3 Adjust the oscilloscope delay (div.) until the intensified Spot coincides with the leading edge of the second pulse on the display.
- 4 Switch to Delayed sweep display on oscilloscope and Magnifier X 10
- 5 Measure pulse period jitter t .

CAUTION

Output power when 4–16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-9. Performance Check — Pulse Width Jitter

INITIAL CONTROL SETTINGS

PULSE PERIOD 2	0.1m – 5m
VERNIER 3	CW
PULSE WIDTH 4	50μ – 2.5m
VERNIER 5	CCW
AMPLITUDE 6	4 – 16
VERNIER 7	CW
POLARITY 11	POS
INT LOAD 8	ON

STEP INSTRUCTIONS

RESULTS

- Set the controls of the oscilloscope as follows
Main Sweep .1ms/cm
Delayed Sweep 10μs/cm
Sweep Display MAIN
Magnifier X 1
- Adjust the pulse width vernier to obtain a 1ms pulse width.
- Adjust the Delay (Div.) until the intensified spot coincides with the trailing edge of the first pulse
- Switch to Delayed sweep display on oscilloscope and Magnifier X 10
- Measure width jitter t

$$t = < 1\mu = < 0.1\% + 50ps$$

CAUTION

Output power when 4–16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-10. Performance Check — External Trigger

INITIAL CONTROL SETTINGS

PULSE PERIOD 2	EXT
VERNIER 3	CW
PULSE WIDTH 4	$50\mu - 2.5m$
VERNIER 5	mid-position
AMPLITUDE 6	1 - 4
VERNIER 7	CW
POLARITY 11	POS
INT LOAD 8	ON

STEP INSTRUCTIONS

- 1 Adjust the oscillator output amplitude to 2.0Vpp and frequency to 1 kHz.
- 2 On the oscilloscope, center both channels vertically.
- 3 Observe pulse, ensure that pulse occurs during positive slope of the input sine wave.

Table 5-11. Performance Check — High Frequency Triggering

**STEP INSTRUCTIONS**

- 1 Adjust the oscillator output amplitude for 2.0Vpp at 8011A TRIG IN.
Set Frequency to 20 MHz.

(NOTE: Perturbation delay of typically 50ns)

- 2 Check that the 8011A output pulse has the same pulse period as the external signal.
- 3 Set the 8011A to NEG and repeat steps 2 and 3.
Set the 8011A to SYMM and repeat steps 2 and 3.

CAUTION

Output power when 4–16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-12. Performance Check — Minimum Width

INITIAL CONTROL SETTINGS

AMPLITUDE	6	4 — 16
VERNIER	7	CW
POLARITY	11	POS
INT LOAD	8	—

STEP	INSTRUCTIONS	RESULTS
1	Set the oscilloscope to obtain a full-screen pulse amplitude display.	
2	Measure pulse width at 50% of amplitude	< 25ns
3	Set 8011A controls to NEG and repeat steps 2 and 3	< 25ns

CAUTION

Output power when 4–16 V range selected can destroy scope's internal 50 ohm load. Use a 20 dB power attenuator.

Table 5-13. Performance Check — Preshoot, Overshoot and Ringing

**STEP INSTRUCTIONS****RESULTS**

- 1 Set the oscilloscope to obtain a full-screen amplitude display.

- 2 With reference to the diagram below, measure preshoot, overshoot and ringing. All should be

≤ 5% of pulse*
amplitude

*Overshoot may increase to 10% with Amplitude vernier CCW.

- 3 Set INT LOAD to OFF. Verify preshoot, overshoot and ringing.

≤ 10 % of pulse
amplitude

CAUTION

Output power when 4–16 V range selected can destroy scope's internal 50 ohm load. Use a 20 dB power attenuator.

Table 5-14. Performance Check — Transition Times

INITIAL CONTROL SETTINGS

PULSE PERIOD	2	50n — 2 μ
VERNIER	3	CCW
PULSE WIDTH	4	SQR WAVE
VERNIER	5	—
AMPLITUDE	6	4–16
VERNIER	7	ADJUST FOR 16V
POLARITY	11	POS
INT LOAD	8	OFF

STEP	INSTRUCTIONS	RESULTS
1	Set the oscilloscope to obtain the following: (1) full screen amplitude display (2) expanded sweep (3) leading edge of pulse at centre of screen	
2	Measure leading edge between 10% and 90% of amplitude	< 10ns
3	Centralize trailing edge on screen	
4	Measure trailing edge between 10% and 90% of amplitude.	< 10ns

CAUTION

Output power when 4–16 V range selected can destroy scope's internal 50 ohm load. Use a 20 dB power attenuator.

STEP	INSTRUCTIONS	RESULTS
1	Check the amplitude for each setting of the controls listed below	
	AMPLITUDE 6	VERNIER 7
	4 — 16	CW (with INT. LOAD OFF) > 16V
		CW (with INT. LOAD ON) > 8V
		CCW < 4V
	1 — 4	CW > 4V
		CCW < 1V
	0.25 — 1	CW > 1V
		CCW < 0.25V

CAUTION

Output power when 4-16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-16. Performance Check – Trigger Output

INITIAL CONTROL SETTINGS

PULSE PERIOD 2	50n – 2 μ
VERNIER 3	CCW
PULSE WIDTH 4	25n – 1 μ
VERNIER 5	CCW
AMPLITUDE 6	0.25 – 1
VERNIER 7	CW
POLARITY 11	POS
INT LOAD 8	ON

STEP INSTRUCTIONS

RESULTS

- 1 Check trigger output
(1) Amplitude:
(2) Width:
- 2 Turn 8011A pulse period vernier slowly clockwise and check that trigger output is as above
- 3 Set the 8011A to SQR WAVE and repeat step 2.

$\geq 1V$
 $> 10ns < 30 ns$

Table 5-17. Performance Check — Repetitive Burst (8011A — Opt. 001)

STEP INSTRUCTIONS

RESULTS

- 1 Set rep. rate of external signal to 2 MHz:

- 2 Select BURST MODE and observe pulses on the oscilloscope

CAUTION

Output power when 4–16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-18. Adjustment Procedure: Power Supplies

INITIAL CONTROL SETTINGS

PULSE PERIOD	2	EXT
VERNIER	3	CW
PULSE WIDTH	4	1 μ - 50 μ
VERNIER	5	CCW
AMPLITUDE	6	1 - 4
VERNIER	7	CW
POLARITY	11	SYMM

BURST MODE		OFF
(if fitted)		

STEP	INSTRUCTIONS	ADJUST	RESULTS
1	The following measurement are with respect to zero volts using a digital voltmeter.		
2	Measure voltage at the +14V test point	A1R125	+14V $\pm$ 100mV
3	Measure voltage at the -14V test point	A1R128	-14V $\pm$ 100mV
4	If the Burst option (001) is fitted measure voltage at the +5V test pin on assembly 1		+5V $\pm$ 200mV
5	The following measurements are with respect to zero volts using an AC voltmeter.		
6	Measure the ripple on the following supplies		
	+14V		<1mV rms
	-14V		<1mV rms
	+5V		<1mV rms

Table 5-19. Adjustment Procedure — Base Line

STEP INSTRUCTIONS

- 1 With the oscilloscope set to Ground, center the trace on the graticule.
- 2 Switch to DC operation and check that the pulse base remains center of the graticule.
- 3 If necessary, adjust R81 accordingly.
- 4 Select NEG on the 8011A.
- 5 Repeat step 2.
- 6 If necessary, adjust R84 accordingly.

CAUTION

Output power when 4-16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-20. Adjustment Procedure-Amplitude

STEP	INSTRUCTIONS
1	With the oscilloscope set to ground, center the trace on the graticule.
2	Adjust A1R131 for a positive amplitude of 8.1 V
3	Adjust A1R133 for a negative amplitude of 8.1 V
4	Re-check Base Line Table 5-19

**CAUTION**

Output power when 4-16 V range selected can destroy an ordinary 50 ohm load. Use a 20 dB power attenuator or a 50 ohm power termination.

Table 5-23

Safety Check

1. Disconnect power cord from line. Visually inspect interior for any sign of abnormal internally generated heat, such as discolored printed circuit boards or components, damaged insulation, or evidence of arcing. Determine cause and remedy.
2. Check resistance from cabinet to ground pin on power plug with suitable ohmmeter. The reading must be less than one ohm. Flex the power cord while making the measurement to detect any intermittent discontinuity. Check internal ground connections on boards and frame. Also check resistance of any front or rear panel ground terminals marked
3. Check resistance from cabinet to line and neutral (tied together) with the power switch on and the power source disconnected. The minimum acceptable resistance is two megohms. Replace any component which results in a failure or refer to production Memo or Service Note issued by product division for alternate action.
4. Check line fuse to verify that the proper value is installed.
5. Check that the plastic safety cover for the line fuse is installed.
6. Check that all coaxial and flat cables inside are properly connected. Check that all boards and the heatsink on the chassis are properly connected.
7. Inform Hewlett-Packard (internally, the responsible product division) of any repeated failures in the above tests or any other safety features.

6-1 INTRODUCTION

6-2 This section contains the circuits, component location diagrams and the lists of replaceable parts. Waveforms shown with the circuits are included for guidance only and failure to observe identical results should not be automatically taken as indication of a fault.

6-3 ORDERING INFORMATION

6-4 General

6-5 The replaceable parts tables list parts in alphanumerical order of their reference designators and indicate the description and HP stock number of each part, together with any applicable notes.

6-6 To order a replacement part, address order of enquiry either to your authorized Hewlett-Packard sales representative or to:

CUSTOMER SERVICE

Hewlett-Packard Company,
333 Logue Avenue,
Mountain View, California 94040

or, in Wester Europe, to:

Hewlett-Packard (Schweiz) SA
Rue du Bois-du-Lan 7
1217 Meyrin 2
Geneva

6-7 Specify the following information for each part:

- a) Model and complete serial number of instrument.
- b) Hewlett-Packard stock number.
- c) Circuit reference stock number.
- d) Description.

To order a part not listed, give a complete description of the part and include its function and location.

Table 6--1. Reference Designators

A	= assembly	P	= plug
B	= motor	Q	= transistor
BT	= battery	R	= resistor
C	= capacitor	RT	= thermistor
CP	= coupler	S	= switch
CR	= diode	T	= transformer
DL	= delay line	TB	= terminal board
DS	= lamp	U	= micro-circuit
F	= fuse	V	= vacuum, tube, neon bulb, photocell, etc.
FL	= filter	VR	= voltage regulator
HR	= heater	W	= cable
J	= jack	X	= socket
K	= relay	Y	= crystal
L	= inductor	TP	= test point
M	= meter		

Table 6-2. Diagram Notes

Resistance in ohms, capacitance in microfarads, inductance in microhenries unless other noted

All voltages are referenced to floating ground.

P/O	Part of
*	denotes a factory selected value. Values shown are typical.
	Screwdriver adjustment
	Encloses front panel nomenclature
	Encloses rear panel nomenclature
	Zener diode
	Chassis ground (0 volts)
	Floating ground
	Wire colour e.g. white, black, brown.
	Part of push-button switch
	Signal input/output connectors

6-8 CIRCUIT DIAGRAM WAVEFORMS

6-9 Waveforms shown on the circuit diagrams 1 to 3 were taken with the 8011A set as follows, changes in time base and sensitivity are noted on the waveform concerned:

PULSE PERIOD	50n - .2μ
VERNIER	Mid-range
PULSE WIDTH	25n - 1μ
VERNIER	Mid-range
AMPLITUDE	1V - 4V
VERNIER	CW
SYM	ON
COMPL	OFF
BURST	OFF

To obtain waveforms shown on diagram 5 select BURST MODE.

NOTES:

1. ALL VOLTAGES ARE REFERENCED TO FLOATING GROUND.
2. ALL SWITCHES ARE SHOWN IN THE "OUT" POSITION.

POSITION TO SELECT MODE OR RANGE

3. COMPONENT A1C7 IS FACTORY SELECTABLE AND MAY VARY FROM 120pF TO 140pF (INFLUENCES MAXIMUM REPETITION RATE)

NOTES:

1. UNLESS OTHERWISE STATED ALL VOLTAGES ARE REFERENCED TO FLOATING GROUND.
2. ALL SWITCHES ARE SHOWN IN THE "OUT" POSITION

3. COMPONENT A1R56 IS FACTORY SELECTABLE AND MAY VARY FROM 90.9 Ω TO 200 Ω (INFLUENCES MINIMUM WIDTH)

Removal of Board A2 (Burst Option) for Troubleshooting

Board A2 is removed, as follows, in preparation for the troubleshooting procedure:

1. Remove screw fixing board A2 to the frame.
2. Place 8011A on its side
3. Remove board A2, leaving ribbon cable, W1 connected (see photograph above)

Table 6-9. Burst Option Troubleshooting

1. With oscilloscope set to $1\mu\text{s}/\text{division}$, set the 8011A output to exactly 1 MHz with minimum width.
2. Set 8011A to Burst Mode.
3. Connect the 8011A TRIGGER OUTPUT to the 8011A TRIGGER INPUT.
4. Disconnect the base connection of transistor A2Q4 and leave as 'open base'.
5. Disconnect pin 13 of A2U12 from socket X2 and leave as 'open circuit'.
6. Wire-connect the open track (from which A2U12 pin 13 is disconnected) to floating ground.
7. Set 1821A to internal trigger.
8. Check the waveforms detailed in the following list:

Test Point	8011 Board A2 Reference Point	Oscilloscope Screen	180C Time/Div	Trigger Slope
1	U18 Pin 1		$1\mu\text{s}$	$\ominus$
2	U15 Pin 4		$1\mu\text{s}$	$\ominus$
3	U22 Pin 4		$10\mu\text{s}$	$\ominus$
4	U24 Pin 4		0.1ms	$\ominus$
5	U24 Pin 7		1ms	$\ominus$
6	U2 Pin 8		$10\mu\text{s}$	$\ominus$
7	U1 Pin 8		1ms	$\ominus$
8	U12 Pins 10, 11		1ms	$\oplus$
9	U11 Pin 8		$10\mu\text{s}$	$\ominus$
10	U9 Pin 8		1ms	$\ominus$
11	U19 Pin 2		1ms	$\ominus$
12	Q3 emitter		1ms	$\oplus$
13	U19 Pin 13		$1\mu\text{s}$	$\ominus$
14	U19 Pin 6		1ms	$\oplus$
15	Q3 collector		1ms	$\oplus$
16	U19 Pin 8		1ms	$\ominus$
17	U12 Pin 13		1ms	$\oplus$

NOTES: 1. * Only for Burst number greater than 0000
 2. Some duty cycles are difficult to see on oscilloscope screen

9. Set the 8011A to SYM output and check all power supply voltages.

10. Check that all the A2J1 pins which are normally connected to the thumbwheel switches (but now disconnected) are high.

NOTES

- 1 Outputs from the exclusive OR gates MC 6 to MC 8 are given in the Boolean Algebra form e.g. $(80 \cdot C80 + 80 \cdot \bar{C}80)$ means that the output is "true" when either 80 is present and C80 is not present or when 80 is not present and C80 is present
- 2 Normally components A2 C17 and A2 C18 are not needed, but on occasions when they are needed, both values are 100pF
- 3 Pin numbers marked between cable W1 and socket A2 X1 refer to the X1 pin number (pin 1 of socket X1 is marked by a solder spot on the component side of A2). The corresponding cable W1 pin number is marked in brackets
- 4  Indicates a trouble-shooting test point (see table facing)

SEE NOTE 3

7-1 INTRODUCTION

7-2 This section contains backdating information which adapts this manual to instruments with serial numbers lower than that shown on the inside of the front cover.

NOTES: 1. The backdating information does not include changes detailed in Service Notes 8011A-G1 to 8011A-G5. These changes are also serial number related, and should be incorporated (in manual and instrument) in addition to the backdating information.

2. During the production life of this instrument, certain capacitors have been changed for improved component quality. When replacing these parts in old instruments, the values given in this manual should be the replacement value. The capacitors concerned are as follows:

Board A1 (Standard and Option) — C2, C3, C6, C12, C13, C14, C15, C16, C18, C19, C25, C26, C32, C33, C34, C39, C40, C41, C42, C46, C47, C48, C51, C52, C53, C54.

Board A2 — C1, C4, C5, C7, C8

CHANGE 1 (Serial number 1411G00910 and below)
On schematic 1, disconnect pin 13 of EXT switch from +14V.

CHANGE 2 (Serial number 1410G00380 and below)
in Tables 6-5 and 6-8 change the following components to:

C24	0140-0192	C-F 68pF 300 V
