Service Information

Nakamichi

Model: Nakamichi TX-1000 (Computing Turntable)
Serial No.: from V10101171 – 1082.
Subject: Addition of Controls, and Modification of Sensor Arm Descending Position Adjustment and Circuits

No. OOD-M-0202 (1/12)
Date 1 September 1982

1. General

1.1. Purpose

(1) Sensor Arm Position Screwdriver Controls have been mounted on the Display Panel on the left side of the TX-1000. Refer to Fig. 1.1.
Customer can calibrate the descending position (touch-down position) of the Sensor Arm Stylus with these controls. However, these controls are normally set to their center click positions.

(2) The permitted limit of descending position of the Sensor Arm Stylus has been changed, and as a result Stylus Positioning Gauge has been changed (grooves showing the permitted limit on the Gauge changed).
Permitted Limit:
From "within ±1.0 mm on the 30/25 or 17 cm line" to "within 0 to −1.0 mm on the 30/25 or 17 cm line"
Stylus Positioning Gauge:
From 0D04092A to 0D09022A
Refer to 2-(4) "Sensor Arm Descending Position Adjustment".

1.2. Modification

(1) According to the modification stated in 1.1-(1), following have been changed.
Display House Ass'y:
From HA08048A to HA08064A
Lamp House P.C.B. Ass'y:
From BA04704A to BA04850A
Amp. P.C.B. Ass'y:
From BA04702A to BA04849A

(2) Circuit of the Control P.C.B. Ass'y (BA04672A) has been modified.

(3) Patterns of the CPU P.C.B. Ass'y (BA04748A) have been changed (circuit stays the same).

1.3. Compatibility (of new P.C.B. assemblies with current ones)

Not possible. However, if the Lamp House P.C.B. Ass'y and Amp. P.C.B. Ass'y are changed simultaneously, interchangeability is retained.

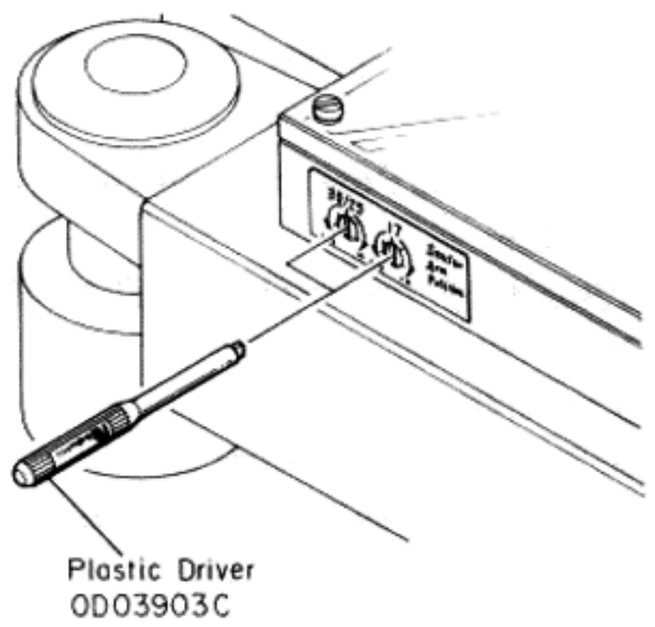

Fig. 1.1

2. Sensor Arm Adjustment

Note: Before adjustment, set the Sensor Arm Position Screwdriver Controls (VR901 and VR902) located alongside the Display Panel to their center click positions.

(1) Removal of Display House Ass'y

(a) Take off the four Display Screws.
(b) Remove Display Cover.
(c) Peel off Display Name Plate which is stuck to Display House Ass'y with adhesive tape.
(d) Take out five screws to remove Display House Ass'y.

(2) Temperature-compensating Circuit Adjustment

Refer to Fig. 2.1.
(a) Connect a digital voltmeter to the test point LED CURRENT.
(b) One minute or more after turning on the power, adjust VR602 to obtain 0 V ±40 mV on the voltmeter.
Note: During the adjustment the reading will slowly fluctuate. It is adjusted sufficiently if the reading is at least once within the above rating.

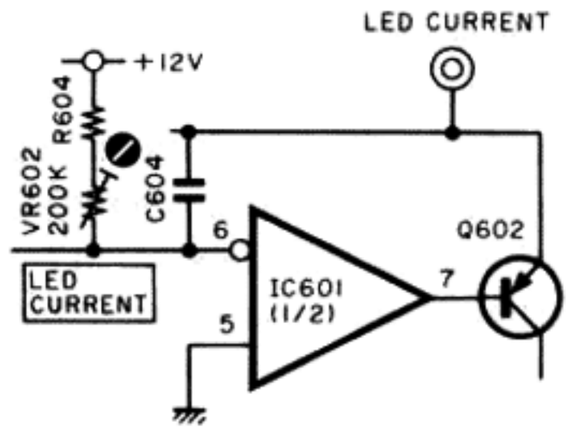

Fig. 2.1

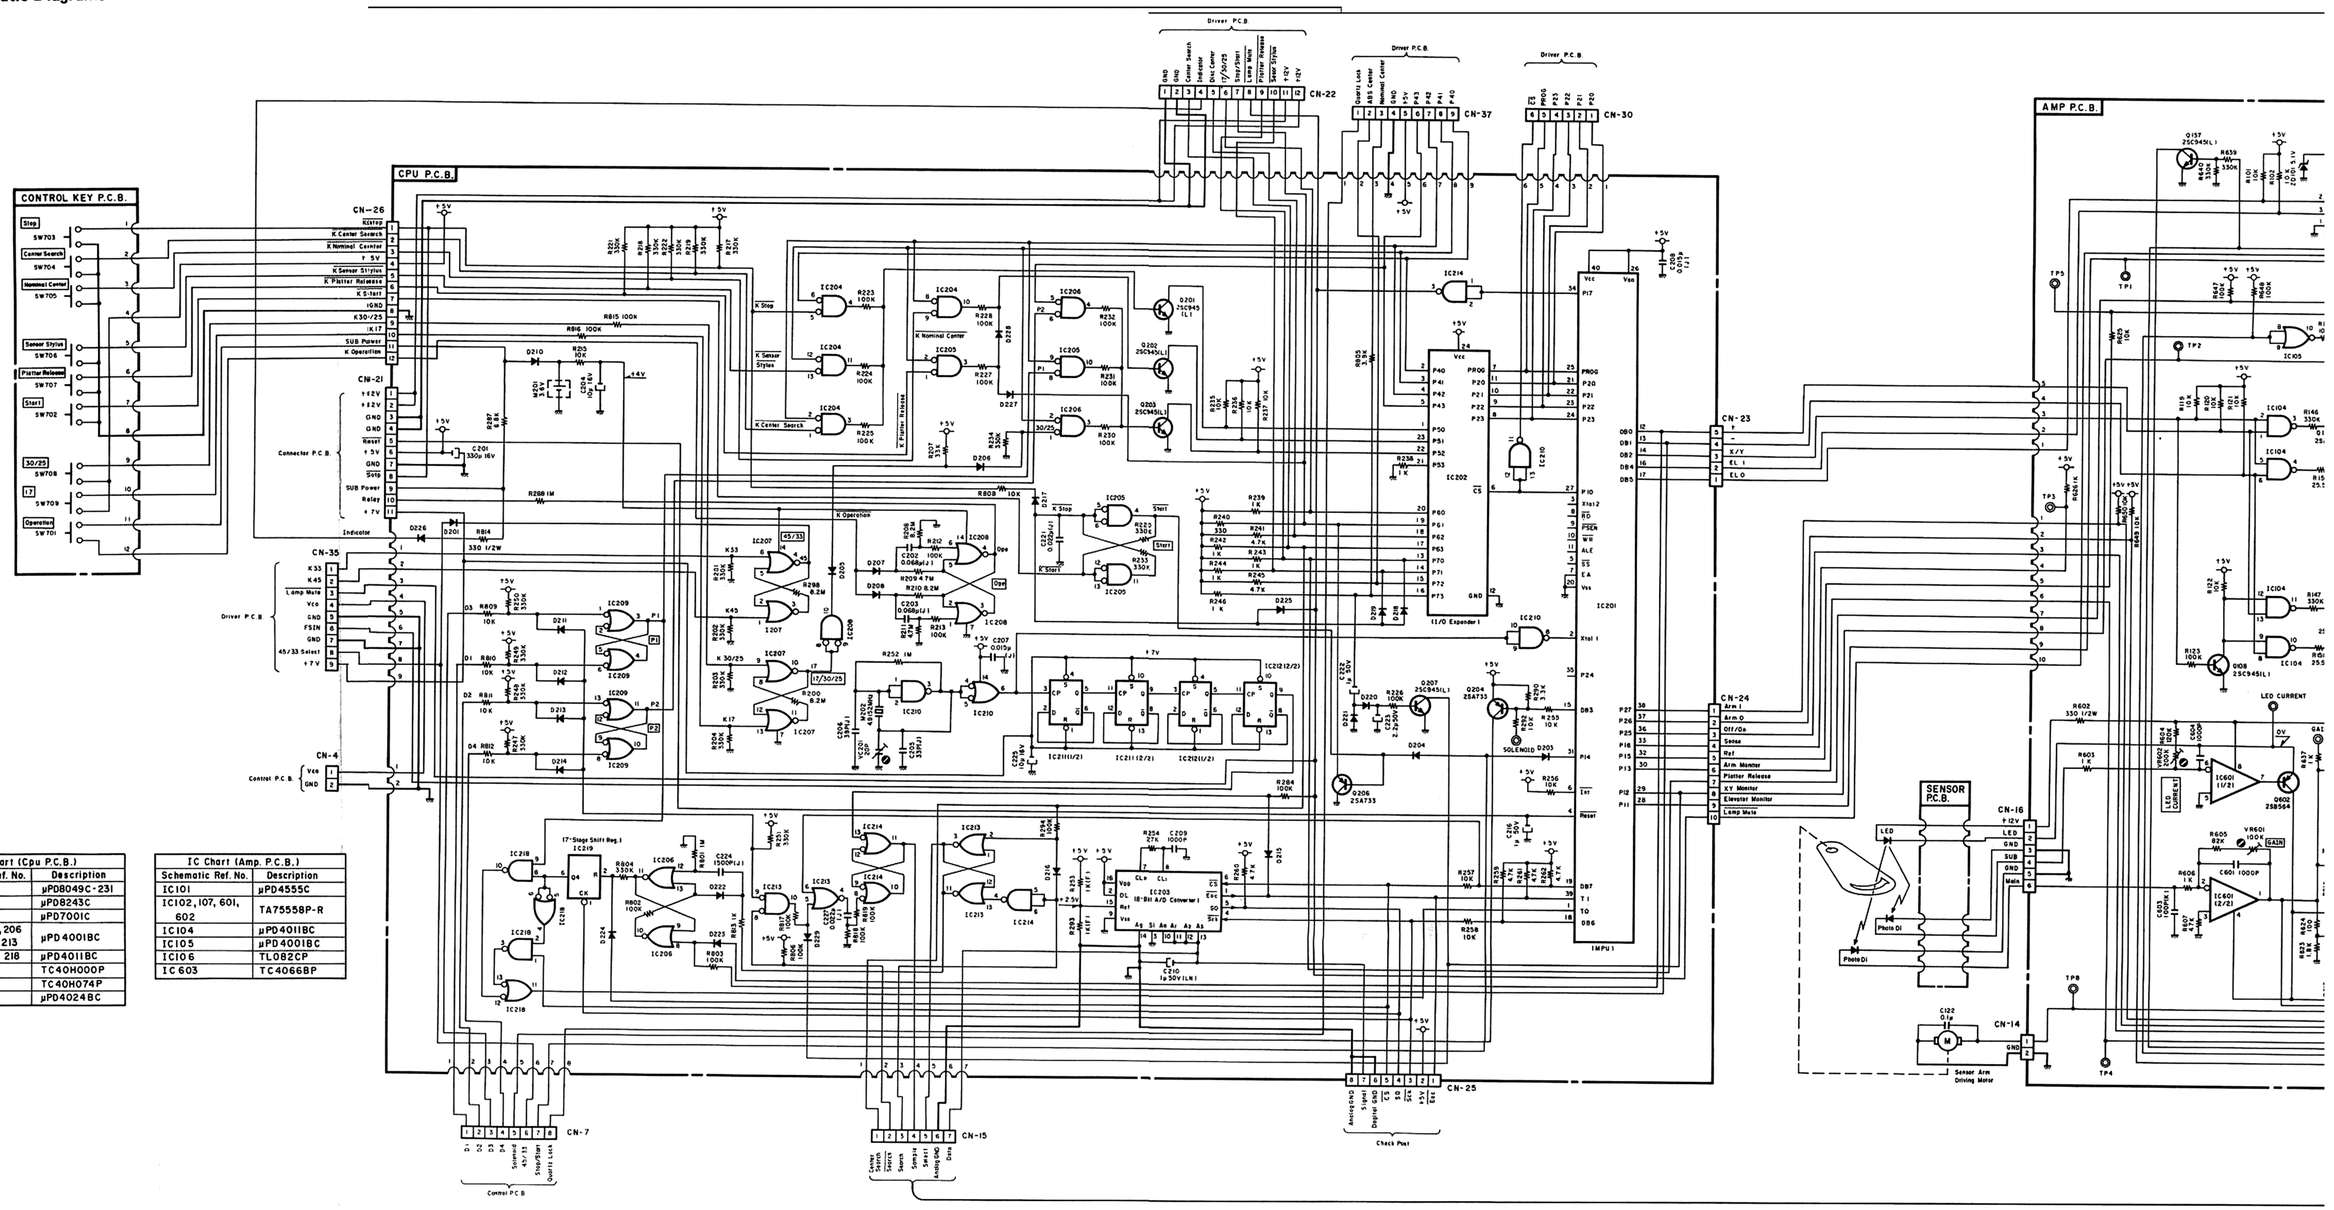
7. New Schematic Diagrams



IC Chart (Cpu P.C.B.)	
Schematic Ref. No.	Description
IC201	μPD8049C-231
IC202	μPD8243C
IC203	μPD7001C
IC204, 205, 206 207, 208, 213	μPD4001BC
IC209, 214, 218	μPD4011BC
IC210	TC40H000P
IC211, 212	TC40H074P
IC219	μPD4024BC

IC Chart (Amp. P.C.B.)	
Schematic Ref. No.	Description
IC101	μPD4555C
IC102, 107, 601, 602	TA75558P-R
IC104	μPD4011BC
IC105	μPD4001BC
IC106	TL082CP
IC603	TC4066BP

(3) Sensor Arm Gain and Arm Rest Position Adjustment

Refer to Figs. 2.2 and 2.3.

(a) Connect a digital voltmeter to the test point GAIN.

(b) Place the Stylus Positioning Gauge (0D09022A) on the Center Search Platter.

(c) Press the Disc Size Selector switch 17.

(d) Press the Center Search switch, then Stop switch and Disc Size Selector switch 30/25 in quick succession. Pull the Sensor Arm back manually towards the center of Platter until it comes to the stopper. When in this position, adjust VR601 to obtain −2.7 V ±0.01 V on the voltmeter.

(e) Press the Stop switch to release the Center Search mode.

(f) While repeatedly pressing the Sensor Stylus switch, adjust the mechanical pressure of the Sensor Arm using VR106 when the Sensor Arm comes to rest on the Arm Rest.
Adjustment shall be made so that the Sensor Arm cannot bump against the Arm Rest.

(g) After completing the above adjustments, connect the digital voltmeter to TP8 to make sure that its reading is within a range of 0 to −2.5 V.

(4) Sensor Arm Descending Position Adjustment

Refer to Figs. 2.3 – 2.5.

(a) Place the Stylus Positioning Gauge (0D09022A) on the Center Search Platter.

(b) Connect TP3 to GND.

(c) Press the Disc Size Selector switch to 17.
Press the Center Search switch, then the Stop switch and Disc Size Selector switch 30/25 in quick succession.
The Motor will stop and the Sensor Arm Stylus will descend onto the Stylus Positioning Gauge.

(d) Connect a digital voltmeter to the test point GAIN.

(e) Place the Sensor Arm Stylus manually onto the A/D FS line on the Stylus Positioning Gauge, and make sure that the voltmeter reads between 0 and −2.7 V.

(f) Connect the digital voltmeter to the test point OFFSET.
Adjust VR109 to obtain 2.45 V ±0.01 V on the voltmeter.

(g) Place the Sensor Arm Stylus manually onto the A/D 0 line on the Stylus Positioning Gauge, and make sure that the voltmeter reads 0.2 V or more.

(h) Press the Disc Size Selector switch 30/25. Adjust VR105 so that descending position of Sensor Arm Stylus is within 0 to −1.0 mm on the 30/25 cm line. While pressing the Disc Size Selector 17 and 30/25 switches alternately, repeat the descending operation several times to make sure that the Stylus descending position is within the above range.

(i) Press the Disc Size Selector switch 17. Adjust VR104 so that the descending position of the Sensor Arm Stylus is within 0 to −1.0 mm on the 17 cm line. While pressing the Disc Size Selector 30/25 and 17 switches alternately, repeat the descending operation several times to make sure that the Stylus descending position is within the above range.

(j) Press the Stop switch to release the Center Search operation.

(k) Disconnect TP3 from GND.
