

Service Manual

AM/FM STEREO RECEIVER

SX-680

Original

 **PIONEER®**

MODEL SX-680 COMES IN FOUR VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
KU	120V only	U.S.A. model
KC	120V only	Canada model
S	110V, 120V, 220V and 240V (Switchable)	General export model
S/G	110V, 120V, 220V and 240V (Switchable)	U.S. Military model

MODEL SX-690 COMES IN THREE VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
KU	120V only	U.S.A. model
HG	220V and 240V (Switchable)	United Kingdom model
HGW4	220V and 240V (Switchable)	Europe or Oceania model

Although the basic features of models SX-680 and SX-690 are the same, there are a few minor changes in design. The variations in safety standards in different countries has also necessitated variations in power supply and circuit component specifications. Furthermore, the difference in pre-emphasis characteristics employed by FM broadcasting stations has also meant variations in de-emphasis circuit time constant.

This service manual is applicable to the SX-680/KU. For servicing of the other types please refer to the additional service manuals.

Amplifier Section

Continuous Power Output of 30 watts* per channel, min., at 8 ohms or 37 watts per channel at 4 ohms from 20 Hertz to 20,000 Hertz with no more than 0.1% total harmonic distortion.

Total Harmonic Distortion (20 Hertz to 20,000Hertz, from AUX)

- continuous rated power output . . . No more than 0.1%
- 15 watts per channel power output,
 - 8 ohmsNo more than 0.08%
 - 1 watt per channel power output,
 - 8 ohmsNo more than 0.05%

Intermodulation Distortion (50 Hertz: 7,000 Hertz = 4:1, from AUX)

- continuous rated power output . . . No more than 0.1%
- 15 watts per channel power output,
 - 8 ohmsNo more than 0.08%
 - 1 watt per channel power output,
 - 8 ohmsNo more than 0.05%

Damping Factor (20 Hertz to 20,000 Hertz, 8 ohms) . . 25

Input Sensitivity/Impedance

- PHONO2.5mV/50 kilohms
- AUX150mV/50 kilohms
- TAPE PLAY 1150mV/50 kilohms
- TAPE PLAY 2150mV/50 kilohms

PHONO Overload Level (1kHz, T.H.D.: 0.1%) . . . 200mV

Output (Level/Impedance)

- TAPE REC 1150mV
- TAPE REC 2150mV
- SPEAKERSA, B, A+B
- HEADPHONESLow impedance

Frequency Response

- PHONO(RIAA Equalization). 30Hz to 15,000Hz ±0.5dB
- AUX, TAPE PLAY5Hz to 100,000Hz ±3dB

Tone Control

- BASS+8dB, -8dB (100Hz)
- TREBLE+10dB, -10dB (10kHz)

Loudness Contour (Volume control set at -40dB position)

.+6dB (100Hz), +3dB (10kHz)

Hum and Noise (IHF, short-circuited, A network, rated power)

- PHONO75dB
- AUX, TAPE PLAY90dB

**Measured pursuant to Federal Trade Commission's Trade Regulation Rule on Power Output Claims for Amplifiers.*

NOTE:

Specifications and design subject to possible modification without notice due to improvements.

2. FRONT PANEL FACILITIES

POWER METERS

These meters allow you to read out the rated power level when speakers with a nominal impedance of 8 ohms are connected to the receiver's speaker terminals.

NOTE:

These values are related to the impedance of the speakers and they vary according to the frequency. In order to find out the exact output level, connect an 8-ohm dummy load instead of the speakers.

TAPE MONITOR INDICATOR

With either of the TAPE MONITOR switches set to ON, the TAPE MONITOR indicator lights up. This lamp indicates the receiver is monitoring or playing back the tape on the tape deck connected to the TAPE jacks.

SOURCE INDICATOR

With either of the TAPE MONITOR switches set to OFF, the SOURCE indicator lights up. This lamp indicates the receiver is playing the program source; AM broadcast, FM broadcast, record on the turntable, or another component connected to the AUX jacks.

DIAL POINTER

This pointer indicates the broadcasting stations.

STEREO INDICATOR

This indicator lights up when the receiver is tuned in to receive a stereo broadcast.

AM/FM TUNING METER

When tuning in to FM stations, position the meter pointer in the center of FM area for optimum reception. In the case of AM stations, tune for maximum meter deflection toward the right of the scale.

TUNING KNOB

Use this to tune in to broadcasting stations. Select the station and tune for optimum reception by observing the dial scale and the AM/FM tuning meter.

VOLUME CONTROL

Use this control to adjust the output level to the speakers and headphones. Turn it clockwise to increase the output level. No sound will be heard if you set it to MIN.

POWER SWITCH

Depress this button (in the ON position) to supply power to the receiver. There will be a short delay when it is set to ON, because the muting circuit has been actuated to suppress the unpleasant noise that is sometimes generated when the power is switched on and off.

LOUDNESS SWITCH

Depress this button (ON position) when listening at a low volume. The frequency response of the human ear varies according to the listening volume, and setting this switch to the ON position compensates for hearing response by emphasizing the bass and treble.

PHONES JACK

Plug the headphones into this jack when you want to listen through your stereo headphones. Release both SPEAKERS buttons if you want to listen to the sound through your headphones only (This means that both buttons will be released).

BALANCE CONTROL

Use this control to balance the volume of the left and right channels. First, however, set the mode select switch (MODE/FM MUTE) to MONO. If the sound appears to be louder on the right, it means that the volume of the right channel is higher. Turn the BALANCE control to the left and adjust. Conversely, if the sound appears to be louder on the left, it means that the volume of the left channel is higher. Therefore, turn the BALANCE control to the right and adjust. After adjusting, return the mode select switch (MODE/FM MUTE) to STEREO.

SPEAKERS SWITCHES

Depress the button corresponding to the speakers connected to the SPEAKERS terminals (A or B) on the rear panel. You can depress both of these buttons to listen to sound from two pairs of speaker systems at the same time.

MODE/FM MUTING SWITCH

This switch is a combination of the FM muting switch and the mode select switch. When the button is left undepressed (ON position) the reproduction is in STEREO mode, while the FM muting function acts to suppress unpleasant interstation noise while tuning between FM stations when listening to FM broadcasting. When the button is depressed (OFF position), however, reproduction is in MONO mode, while the FM muting function does not act, thus enabling suitable reception of weak radio stations when tuning in to the FM broadcasting station.

NOTE:

Recording stereophonically with the mode select switch (MODE/FM MUTE) in the MONO position may cause deterioration in channel separation.

FUNCTION SWITCH

Use this switch to select the program source. For a second after the switch is selected, no sound will be heard. This is due to the operation of the muting circuit, which mutes the unpleasant switching noise generated when the FUNCTION switch is selected.

AM: When listening to AM broadcasting.

FM: When listening to FM broadcasting.

The STEREO indicator lights up when the receiver is tuned in to an FM stereo broadcast.

PHONO: When playing a record on the turntable connected to the PHONO jacks.

AUX: When listening to an audio component connected to the AUX jacks.

TAPE MONITOR SWITCHES (1, 2)

Depress the switch 1 with a tape deck which is connected to the TAPE 1 jacks (REC and PLAY) when you want to monitor the playback or recording of a tape. The tape on a deck which is connected to the TAPE 2 jacks (REC and PLAY) can be similarly monitored by depressing the switch 2.

NOTE:

Set these switches to the released (OFF) position when you listening to records or a broadcasting.

RESISTANCE VALUE CODES

Code numbers of resistors used in Pioneer equipment are expressed in the following way:—

Furthermore, in the list of parts found in the Service Manual, the resistance (code value) part of the above code number is expressed as □□□ or □□□□.

Resistors included in the Service Manual list of parts

Ex. RD 1/4 PS □□□ JNL

When ordering resistor components, first ascertain the actual resistance value from the circuit diagram, and then convert it into code no. form as shown in the following examples.

For further details on code numbers, refer to "Tuning Fork" VOL. 1.

Ex. 1 For □□□□ Codes

* General resistors

* Resistors with fractional values

Ex. 1

Nominal resistance (Ω)	Significant figure (two figures)	Multiplier (10 ^x)	Resistance value code
5.1	510		5R10
5.62	562		5R62
10	100		10R0
22.5	225		22R5
110	110	x10 ⁰	1100
1k (1000)	100	x10 ¹	1001
1.56k (1560)	156	x10 ¹	1561
10k (10000)	100	x10 ²	1002

2.2M (2200000)	22	x10 ⁵	225

3. BLOCK DIAGRAM

4. CIRCUIT DESCRIPTIONS

4.1 TUNER SECTION

FM Front-end

The FM front-end consists of a 3-ganged tuning capacitor, a dual-gate MOS FET equipped 1-stage RF amplifier, a local oscillator and a mixer. The output of the local oscillator (a modified Clapp circuit employing a single transistor) is applied to the base of the mixer transistor.

IF Amplifier and Detector

This stage is made up of one IC, one transistor, and two dual-element ceramic filters. The NPN transistor inserted between the filters is employed for IF amplifier impedance matching purposes. The IC (PA3001-A) in the following stage incorporates IF amplifiers, quadrature detector, meter drive, and FM muting circuit, etc. See the block diagram on page 18 for the internal structure of this IC.

Multiplex Decoder

The sub-carrier generator (PLL system), NFB demodulator, automatic pilot canceller, and stereo/mono automatic switch are also built from an IC (PA1001-A). With the addition of a few CR elements, a multiplex decoder of high S/N ratio and low distortion has been achieved (Again, refer to page 18 for further details of this IC). A major feature of the PA1001-A is the automatic pilot canceller. This circuit detects the level of the 19kHz pilot signal, and automatically adjusts to that level to cancel out the pilot signal completely. This has made the designing of the low-pass filter in the following stage very much easier, and has further extended the frequency response at the high end.

The output signal from the multiplex decoder is passed on via the de-emphasis circuit and AF amplifier (which serves as both low-pass filter and crosstalk canceller) to the FUNCTION switch.

AM Tuner

The AM tuner stage consists of a 2-ganged tuning capacitor, an IC (HA1197) and a ceramic filter. See page 18 for details of the internal structure of HA1197 which contains a 1-stage RF amplifier, converter, 2-stage IF amplifier, detector, and AGC circuit.

4.2 AUDIO SECTION

Equalizer Amplifier

The phono equalizer amplifier is an emitter-to-emitter feedback-type 3-stage direct-coupled amplifier, designed with a gain of 35.5dB (1kHz), a

phono overload level of 200mV (1kHz, THD 0.1%), and equalizer deviation of ± 0.3 dB (30Hz–15kHz).

Buffer Amplifier

This is a single transistor amplifier with a gain of approx. 12dB.

Power Amplifier

The power amplifier, which includes a hybrid IC (STK-0039) in the power stage, is a first-stage differential amplifier all-stage direct-coupled OCL circuit. This IC features an inverted Darlington connection quasi-complementary circuit power stage integrated with the bias circuit. The output power obtainable with an 8-ohm load is 30 watts (20–20,000Hz, THD 0.1%).

The tone controls (BASS, TREBLE) are operated by changing the frequency response of the power amplifier NFB circuit.

Output Meter Drive Circuit

Fundamentally, this circuit is the same as those employed in the SA-7700 and the SA-6700. A wide meter range is obtained by compressing the dynamic range of the output signal by taking advantage of the initial portion of the diode V_F – I_F relation.

Audio Muting Circuit

The FET gate circuit connected to the input of the power amplifier stage serves as a muting circuit which eliminates unwanted switching noises when the power supply is turned on and off and when the FUNCTION selector is used. The circuitry involved and the voltage changes at different points are shown in Figs. 1–2.

- When the power supply is turned on

Since $-B_2$ is applied to the base of Q_2 very quickly, this transistor will remain off when the power supply is first turned on. And, since the $-B_1$ level is established more rapidly than the $+B_2$ level, the potential at point A will initially be lowered to the $-B_1$ level, thereby keeping the FET switched off, and preventing the application of any signal to the input of the power amplifier stage (i.e. the signals are muted during this period).

As the $+B_2$ level is gradually established, the potential of point A will also increase in response, resulting in the FET being turned on some 6 seconds later to terminate the muted condition.

- When the power supply is turned off

The $-B_2$ voltage level diminishes relatively rapidly, and Q_2 is turned on by the forward biasing (because $-B_1$ diminishes rather slowly). Consequently, the potential at point A is reduced to $-B_1$, and the FET is turned off. This muting status is achieved within 0.1 second after the power supply is turned off.

- When FUNCTION selector is operated

When the FUNCTION selector switch is at any of the selector positions, Q_1 will remain off due to $+B_1$ being applied to its base via the FUNCTION switch. But since this is a non-shorting type selector switch, the $+B_1$ being applied to the base of Q_1 will be interrupted whenever the position of the

selector switch is changed. Both Q_1 and Q_2 will thus be turned on temporarily. As a result, the potential at point A will be reduced to $-B_1$, followed by the FET being turned off and the power amplifier stage being muted. However, once the FUNCTION selector switch has been completely switched to the next position, $+B_1$ will again be applied to the base of Q_1 , resulting in Q_1 and Q_2 being turned back off. The potential at point A will consequently increase (at a speed determined by the R_1, C_1 time constant) until the FET is turned on, and the muting condition terminated.

Note that when the TAPE MONITOR switch is ON, Q_1 will be disconnected from Q_2 , so the power amplifier stage will no longer be muted when the FUNCTION selector is operated.

Fig. 1 Basic circuitry of muting circuit

5. DISASSEMBLY

Wooden Cover

Remove the two screws on each side of the wooden cover (❶ — ❷).

Bottom Plate

Remove the ten screws (❸ — ❷) to detach the bottom plate.

Front Panel

Remove all the knobs by pulling (excluding the push buttons).

Remove the two screws (❸ , ❹) from the top edge of the front panel. Remove the two nuts from the control shafts.

6. PARTS LOCATIONS

Front Panel View

Front View with Panel Removed

Top View

Rear Panel View

7. DIAL CORD STRINGING

1. Remove front panel (See page 10).
2. Remove the tuning drum from the tuning capacitor shaft.
3. Tie one end of the string to the stud on the inside of the tuning drum.
4. Set the tuning capacitor to its maximum capacity (with the vanes fully meshed).
5. Attach the tuning drum to the tuning shaft so that the fixing screw head is pointing exactly upwards.
6. Draw the string out through the gap cut in the tuning drum, and after passing it half-way round the drum, thread it successively over the pulleys A, B, C.
7. Pass the string over pulley D after having wound it three times around the tuning shaft (in a clockwise direction as viewed from the rear).
8. Tie the other end of the string to the hook on the spring, so that the string is tensioned, after passing it twice around the tuning drum.
9. Set the tuning capacitor to its maximum capacity (with the vanes fully meshed).
10. Attach the dial pointer to the string at the start point (at the extreme left-hand dial scale), and secure it firmly to the string.
11. Check that when the tuning shaft is turned, the dial pointer, tuning capacitor, etc., all move smoothly.
12. Paint-lock the knots on the string, and cut off the excess after painting.

8. ADJUSTMENTS

8.1 FM TUNER

The tuning coil in the FM front end does not have an adjusting core. Consequently, tracking adjustments at 90MHz are performed by regulating the gap between rotor and stator of the tuning capacitors (VC_1 , VC_2 , VC_3). The expression adjust VC_1 , (VC_2 , VC_3) found in the text means that the two outer rotor blades of each of these tuning capacitors are to be extended outwards with spatula (Part No. G GK-066) as shown in Fig. 5.

Fig. 5 Adjustment of Tuning Capacitor

1. Connect up the test instruments as shown in Fig. 7.
2. Set the FUNCTION switch to FM.
3. Turn the MODE/FM MUTE switch to OFF.
4. Set the dial pointer of the SX-680 to 106MHz.
5. Set the FM Signal Generator (FM SG) output to 106MHz at 106dB, with 100% modulation (75kHz deviation) for 400Hz. This modulation setting should be used for all the following adjustments.
6. Adjust TC_3 to give the maximum reading on the multitester (with DC 500 μ A range).
7. Adjust the primary (lower) core of T_2 so that the AM-FM meter (the FM tuning meter) indicator needle reads dead center.
8. Set the FM SG output to 15dB.
9. Adjust TC_1 and TC_2 to give the maximum reading on the multitester.

10. Set the SX-680 dial pointer to 90MHz.
11. Set the FM SG output to 90MHz at 106dB.
12. Adjust VC_3 for maximum reading on the multitester.
13. Set the FM SG output to 15dB.
14. Adjust VC_1 and VC_2 so that the multitester reading reaches a maximum.
15. Repeat the adjustments of VC_3 , VC_1 and VC_2 when the dial pointer is at 90MHz, and of TC_3 , TC_1 and TC_2 when the dial pointer is at 106MHz, alternately until adjustment at the one frequency requires no further re-adjustment at the other frequency.
16. Adjust the core of T_1 to give the maximum reading on the multitester.
17. De-tune the SX-680 (to a position at which only inter-station noise is heard), and adjust the primary (lower) core of T_2 so that the AM-FM meter indicator needle reads at dead center.
18. Set the FM SG output to 98MHz at 66dB.
19. Tune the SX-680 to a dial reading of 98MHz observe that the AM-FM meter is reading correctly at the center of the meter scale.
20. Adjust the secondary (upper) core of T_2 to give a minimum level of distortion.
21. Repeat the steps detailed in section 17 to 20 for the adjustment of the primary and secondary cores of T_2 until both requirements are fully met.
22. Set the SX-680 dial indication and FM SG frequency for 98MHz.
23. Set the MODE/FM MUTE switch to the ON, and check the muting threshold. If the muting threshold is more than 28dB, cut the jumper lead A.

Multiplex Decoder

24. Connect a MPX Signal Generator (MPX SG) to the external modulator terminals of the FM SG.
25. Connect the 19kHz pilot output signal from the MPX SG to the X-plates (horizontal input) of an oscilloscope, and use a probe to connect the Y-plates (vertical input) to the TP_2 terminal.
26. Set the FM SG output to 66dB, unmodulated.
27. Adjust VR_1 to freeze motion of the resulting Lissajous' figures.

NOTE:

Lissajous' figure adopts the general form shown in Figure 6 due to the fact that the MPX SG 19kHz pilot signal output is a sine wave, and the TP_2 terminal carries a 76kHz saw tooth wave as determined by the adjustment of VR_1 .

28. Turn the FM SG modulation mode setting to external modulation.
29. Adjust the MPX SG modulation settings to 1kHz, L + R, 90% modulation (67.5kHz deviation), with 10% pilot modulation (7.5kHz deviation).
30. Adjust the core of T_1 for minimum distortion in the 1kHz demodulated output from L or R channel.

Fig. 6 Lissajous figure

Fig. 7 Connection diagram

8.2 AM TUNER

1. Connect up the test instruments as shown in Fig. 8.
2. Set the FUNCTION switch to AM.
3. Set AM Signal Generator (AM SG) for 400Hz 30% modulation 100dB output.
4. Set the SX-680 dial indication and AM SG frequency for 600kHz.
5. Adjust T_3 core for maximum reading on AC voltmeter.
6. Set the SX-680 dial indication and AM SG frequency for 1400kHz.
7. Adjust TC_4 for maximum reading on AC voltmeter.
8. Set AM SG for 30dB output.
9. Set the SX-680 dial indication and AM SG frequency for 600kHz.
10. Adjust T_3 and bar antenna core for maximum reading on AC voltmeter.
11. Set the SX-680 dial indication and AM SG frequency for 1,400kHz.
12. Adjust TC_4 and TC_5 for maximum reading on AC voltmeter.
13. Repeat steps 9 to 12, alternately until adjustment at the one frequency requires no further re-adjustment at the other frequency.
14. Adjust F_4 core for give the maximum reading on the AC voltmeter.

Fig. 8 Connection diagram

9. SCHEMATIC DIAGRAMS, P.C. BOARD PATTERNS AND PARTS LIST

9.1 MISCELLANEA

NOTE:

When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω 56 × 10¹ 561 RD½PS 561 J

47kΩ 47 × 10³ 473 RD½PS 473 J

0.5Ω 0R5 RN2H 0R5 K

1Ω 010 RSIP 010 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ 562 × 10¹ 5621 RN½SR 5621 F

ACM-006	TC3 Ceramic trimmer

RESISTORS

Part No.	Symbol & Description
RD4PS 000 J	R101, R103-107, R112, R113, R166, R167
RD4VS 000 J	R102, R108-R111

SEMICONDUCTORS

Part No.	Symbol & Description
3SK59-Y or GR	Q1
(3SK73-Y or GR)	
2SC535-A or B	Q2
2SC461-B or C	Q3

Note: When ordering resistors, convert the resistance value into code form, and then rewrite the part no. as before.

9.5 TAPE ASSEMBLY (GWX-186)

Parts List

Part No.	Symbol & Description
AKB-045	Terminal (TAPE)

9.6 DE-EMPHASIS SWITCH ASSEMBLY (GWX-180)

Parts List

Part No.	Symbol & Description
ASH-015	S8 Slide switch (DE-EMPHASIS)
CQMA 113J 50	C517, C518

9.7 PHONE JACK ASSEMBLY (GWX-179)

Parts List

Part No.	Symbol & Description
RD4PS 151J	R349, R350
AKN-009	Phone jack (PHONE)

9.8 FUSE HOLDER ASSEMBLY (GWX-178)

Parts List

Part No.	Description
AKR-013	Fuse clip

9.9 INDICATOR ASSEMBLY (GWX-177)

Parts List

Part No.	Symbol & Description
CEB 221P 6	C517
RD4PS 471J	R539
RD4PS 821J	R540
AEL-307	D506, D508 LED (red)
AEL-308	D507 LED (green)

9.10 MAIN BOARD ASSEMBLY (GWM-117)

Parts List of Main Board Assembly (GWM-117)
COILS AND FILTERS

Part No.	Symbol & Description		
ATF-013	F1, F2	FM ceramic filter	
ATF-034	F3	AM ceramic filter	
ATF-038	F4	455 kHz BPF	
ATE-040	T2	FM DET	
ATB-013	T3	AM osc. coil	
ATH-016	L301, L302	AF choke coil	2.2 μ H
ATH-022	L7	Micro inductor	

SWITCHES

Part No.	Symbol & Description		
ASE-107	S1	Slide rotary (FUNCTION)	
ASG-140	S2, S3	Dual push (TAPE MONITOR 1, 2)	
ASG-138	S4, S5	Push (MODE/FM MUTE, LOUDNESS)	
ASG-139	S6, S7	Dual push (SPEAKERS)

MODEL SX-690/KU

Although the basic features of models SX-680/KU and SX-690/KU are the same, there are a few minor changes in design. Please refer to the SX-680/KU service manual with exception of this supplement.

CONTRAST OF MISCELLANEOUS PARTS

Part Name	Part No.	
	SX-680/KU	SX-690/KU
Front panel assembly	ANB-596	ANB-625
Dial panel	AAG-158	AAG-172
Packing case	AHD-551	AHD-578
Operating instructions	ARB-268	ARB-291

MODEL SX-680/KC, S, S/G

MODEL SX-680 COMES IN FOUR VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
KU	120V only	U.S.A. model
KC	120V only	Canada model
S	110V, 120V, 220V and 240V (Switchable)	General export model
S/G	110V, 120V, 220V and 240V (Switchable)	U.S. Military model

The variations in safety standards in different countries has also necessitated variations in power supply and circuit component specifications. Furthermore, the difference in the pre-emphasis characteristics employed by FM broadcasting stations has also meant variations in de-emphasis circuit time constant.

RESISTANCE VALUE CODES

Code numbers of resistors used in Pioneer equipment are expressed in the following way:—

Furthermore, in the list of parts found in the Service Manual, the resistance (code value) part of the above code number is expressed as □□□ or □□□□.

Resistors included in the Service Manual list of parts

Ex. RD 1/4 PS □□□ JNL

When ordering resistor components, first ascertain the actual resistance value from the circuit diagram, and then convert it into code no. form as shown in the following examples.

For further details on code numbers, refer to "Tuning Fork" VOL. 1.

Ex. 1 For □□□□ Codes

* General resistors

* Resistors with fractional values

Ex. 1

Nominal resistance (Ω)	Significant figure (three figures)	Multiplier (10 ^X)	Resistance value code
5.1	510		5R10
5.62	562		5R62
10	100		10R0
22.5	225		22R5
110	110	x10 ⁰	1100
1k (1000)	100	x10 ³	1001
1.56k (1560)	156	x10 ³	1561
10k (10000)	100	x10 ⁴	1002
33.6k (33600)	336	x10 ⁴	3362
112k (112000)	112	x10 ⁵	1123
1M (1000000)	100	x10 ⁶	1004
1.56M (1560000)	156	x10 ⁶	1564

Ex. 2 For □□□ Codes

* General resistors

* Resistors with fractional values

Ex. 2

Nominal resistance (Ω)	Significant figure (two figures)	Multiplier (10 ^X)	Resistance value code
0.5	05		0R5
1.5	15		1R5
1	01	x10 ⁰	010
22	22	x10 ⁰	220
330	33	x10 ¹	331
1k (1000)	10	x10 ³	102
5.6k (5600)	56	x10 ³	562
68k (68000)	68	x10 ³	683
820k (820000)	82	x10 ⁴	824
1M (1000000)	10	x10 ⁶	105
2.2M (2200000)	22	x10 ⁶	225
