

**TEAC®**

**SERVICE  
MANUAL  
A-4300SX**

Stereo Tape Deck

TEAC CORPORATION

51031780

# 1. GENERAL DESCRIPTION

The TEAC A-4300SX is an excellent home entertainment stereo tape deck built to semi-professional standards, with 3 motors, 4 heads, foil sensing auto-reverse and index-counter repeat. It operates at 3-3/4 ips and 7-1/2 ips, accepts 7" reels, and features switch-controlled Bias and Equalization; dual range VU meter; two line input jacks per channel; remote controlled (optional) operation; and other convenient features.

Although the A-4300 SX internally appears to be similar to A-4300, significant differences require that you consult this manual before attempting service. The A-4300SX Service Manual/Parts Manual contains adjustment and alignment information, schematic diagram, parts replacement references, and other information for obtaining new parts.

---

## 2. SPECIFICATIONS AND SERVICE DATA

### 2-1 SPECIFICATIONS

Track System	1/4 track 2 channel stereophonic 1/4 track 1 channel monophonic
Heads	Four; Erase, Record and Playback x 2
Reel Size	7" maximum
Tape Speed	7-1/2 ips and 3-3/4 ips
Motors	1 Dual-Speed Hysteresis Synchronous Capstan motor 2 Eddy Current Induction Reel motors
Input (Level and Impedance)	MIC: Specified; -60 dB (0.774 mV)/10k ohms Minimum; -70 dB (0.244 mV) LINE: Specified; -8 dB (308 mV)/50k ohms Minimum; -18 dB (97 mV) DIN: Minimum; -38 dB (9.75 mV)
Output (Level and Impedance)	LINE: Specified; -8 dB (308 mV)/10k ohms Maximum; -2 dB (615 mV) DIN: Maximum; -2 dB (615 mV)
Playback Equalization	7-1/2 ips: NAB 3180 $\mu$ sec, 50 $\mu$ sec 3-3/4 ips: NAB 3180 $\mu$ sec, 90 $\mu$ sec
Bias Frequency	100k Hz ( $\pm$ 5k Hz, push-pull oscillator)
Power Requirement	100, 117, 220, 240 V AC 50/60 Hz (General Export model) 117 V AC 60 Hz (U.S.A. and Canada Model)
Weight	23 kg (51 lbs) net
Power Consumption	90 W
Dimensions (WHD)	440 x 488 x 216 mm (17-5/16" x 19-1/4" x 8-1/2")

### 2-2 SERVICE DATA -MECHANICAL-

Tape Speed Deviation and Drift	3,000 Hz $\pm$ 30 Hz, within 15 Hz
Wow and Flutter	Playback: 0.18% (RMS) at 7-1/2 ips 0.20% (RMS) at 3-3/4 ips Overall: 0.20% (RMS) at 7-1/2 ips 0.25% (RMS) at 3-3/4 ips
Pinch Roller Pressure	2.4 kg (5.3 lbs)
Reel Torque	TAKE-UP: FWD 370 to 410 g·cm (5.2 to 5.7 oz-inch) REV 430 to 470 g·cm (6.0 to 6.6 oz-inch) BACK TENSION: FWD 170 to 210 g·cm (2.4 to 2.9 oz-inch) REV 180 to 220 g·cm (2.5 to 3.1 oz-inch)
Brake Torque	800 to 1,200 g·cm (11 to 17 oz-inch)
F.F/REW Time	160 seconds for 1,800 foot tape

### 2-3 SERVICE DATA -ELECTRICAL-

Frequency Response	Refer to Frequency Response Limits charts in this manual
Signal-To-Noise Ratio	Overall: 48 dB at 7-1/2 ips 46 dB at 3-3/4 ips
Erase Efficiency	68 dB at 1k Hz signal (Measurement with input 10 dB higher than the Specified Input level)
Cross Talk Rejection	40 dB adjacent track at 125 Hz
Stereo Channel Separation	50 dB Channel to Channel at 1k Hz
Total Harmonic Distortion	Overall: 1.5% at 1k Hz signal

**NOTE:** As a result of continuing changes and improvements during the production run, minor differences may be found between early and later machines. Value of "dB" in this manual refers to 0 dB = 0.775 V.

Fig. 2-1 Dimensions

### 3. TOOLS FOR TESTING AND MAINTENANCE

A minimum of the following tools and test instruments are required for measuring and adjusting to obtain optimum performance. Regular maintenance tools will be adequate for those not listed here. If any test instrument listed here is not available, a close equivalent can be used.

- SPRING SCALE . . . . . 0-4 kg (0- 8 lbs)  
0-300 g (0-10 oz)
- FLUTTER METER . . . . . Meguro Denpa Sokki K.K.,  
Model MK-668A
- DIGITAL COUNTER . . . . . Range; 0 Hz-100 kHz
- BANDPASS FILTER . . . . . TEAC MODEL M-206A (1 kHz)
- VTVM (AC) . . . . . Hewlett-Packard Co., Model 400E
- AF OSCILLATOR . . . . . 10 Hz-100 kHz
- ATTENUATOR . . . . . General purpose
- OSCILLOSCOPE . . . . . General purpose
- BLANK TAPE . . . . . TEACYTT-8023 and YTT-8003
- TEAC TEST TAPE . . . . . YTT-1003 (7-1/2 ips), YTT-1002  
(3-3/4 ips) for Playback Alignment test  
YTT-2003 (7-1/2 ips), YTT-2002  
(3-3/4 ips) for Tape Speed  
and Wow Flutter test
- TEAC EMPTY REEL . . . . . RE-702 (2.5" dia, hub)  
RE-701 (4" dia, hub)
- TOOLS . . . . . General  
2 mm nut driver  
Hex Head Allen Wrench  
Plastic alignment tool  
Load resistor non inductive type 8 ohm / 1 W
- DEMAGNETIZER . . . . . TEAC E-3 or equivalent

Fig. 3-1 TEAC Test Tape

Fig. 3-2 Hex Head (Allen) wrench

Fig. 3-3 Spring Scales

## 4. PARTIAL DIS-ASSEMBLY

### 4-1 REMOVING WOODEN SIDES AND REAR PANEL AND BOTTOM PANEL

See illustration for complete dis-assembly instructions. Most amplifier checks and adjustments can be made from the bottom with the (bottom) panel removed.

These adjustments should be performed by experienced technicians, and then only when going through the complete test and check procedures on the unit which is being tested.

Fig. 4-1 Removing Wooden Sides and Rear and Bottom panels

### 4-2 HEAD ASSEMBLY REMOVAL

1. Remove the 2 screws in the top of the head cover and lift it off.
2. Remove 2 screws holding head Base plate (with Heads).
3. Remove 2 mounting nuts through access slot in head Base plate and dis-connect head wires. See Fig. 6-2.
4. If necessary, remove Housing Base plate by 4 screws. See Fig. 4-2.

Fig. 4-2 Head Ass'y Removal

### 4-3 REMOVAL OF CAPSTAN MOTOR

1. Remove the 3 screws holding the capstan motor plate.
2. Unsolder the 6 wires connecting the capstan motor.
3. Remove the 4 screws holding the capstan motor to the motor plate. Watch for the Rubber Cushions (A).
4. Loosen the 2 set screws (hex head) in pulley and lift off pulley (B). Loosen 2 set screws in fan and remove fan.

Fig. 4-3 Capstan Motor Removal

#### 4-4 REMOVAL OF CAPSTAN ASSEMBLY

1. Unscrew dust cap (A) on front panel.
2. Remove 2 screws from Thrust Angle (B). Allow bracket to drop toward floor of case.
3. Remove capstan belt (C).
4. Loosen 2 screws in flywheel (D) Remove flywheel.
5. Remove 3 screws in capstan ass'y (E).
6. Gently move capstan ass'y up and down until it slides out of panel.

**NOTE:** When replacing flywheel, position flywheel on capstan ass'y shaft so that end of shaft protrudes slightly from rear of flywheel. A clearance of approx. 0.01" must be maintained between the end of the capstan shaft and the Thrust Angle.

Fig. 4-4 Capstan Ass'y Removal

#### 4-5 REMOVAL OF REEL MOTOR

1. Disconnect the 4 motor wires from terminals and release wire harness straps.
2. Loosen 2 set screws (hex head) in Brake drum (A) and 2 in the Reel Turntable assembly (F). Lift off these parts.
3. Remove 4 screws securing the Brake Assembly (D) to the motor. Carefully lift off the Brake Retainer (B). Do not remove wires connected to the brake solenoid (C).
4. Remove 4 screws securing Reel Motor (E) to chassis through the front panel.

Fig. 4-5 Reel Motor Removal

#### 4-6 REMOVAL OF TENSION ARMS LEFT AND RIGHT

See illustration for complete dis-assembly instructions.

**NOTE:** After re-assembly check clearance to ascertain that arm moves freely and is not binding. Do not over-tighten screws holding micro-switches. Insulating spacer and micro-switches are easily broken by excess pressure.

Fig. 4-6 Tension Arms Removal

## 5. TAPE TRANSPORT PARTS LOCATION

— REAR VIEW —

**NOTE:** R9, R10 and R11 are adjustable resistors which are used to adjust take-up torque and back tension. Refer to page 11 for the TORQUE MEASUREMENT procedure.

# 6. HEAD REPLACEMENT AND ALIGNMENT

## —MECHANICAL—

### 6-1 HEAD REPLACEMENT AND WIRING

To replace a single head a special 2 mm nut driver is required. Remove the 2 nuts (A) on the defective head through the access hole provided. This releases the head from the mounting plate. Note the position of the wires on the circuit board. Connect the new head in the same manner. Replace the nuts securing the new head to the plate. Perform head alignment before operation.

Fig. 6-1 Head Replacement

Fig. 6-2 Head Wiring —Rear View —

### 6-2 HEAD ADJ. SCREWS AND ALIGNMENT

Fig. 6-3 Head Adjustment Screws and Alignment

### 6-3 VISUAL HEAD ALIGNMENT

Since the propriety of head alignment affects the frequency response on both playback and recording, the head alignment should be done carefully. The head can be adjusted in TILT, TANGENCY, HEIGHT and AZIMUTH. For head alignment, perform the following coarse adjustments first. Then fine alignment should be accomplished electrically while playing back the Test Tape.

#### Coarse Adjustment:

Without Tape

TILT . . . . . By Height and tilt screws

This alignment is performed by viewing from the side without tape threaded.

Check that the head surface is parallel to the tape guide surface.

With Tape

TANGENCY . . . . . By Head mounting Nuts

Loosen the head mounting nuts. Adjust the head so that the vertical alignment of the head gap is perpendicular to the surface of the tape, then tighten the head mounting Nuts.

HEIGHT . . . . . By Height and Tilt screws

This alignment is checked visually by looking at the position of the head.

The head core for track-1 (inner core) should be even with the inner edge of the tape.

AZIMUTH . . . . . By Azimuth adj. Screw

Adjust the azimuth adj. screw so that the gap of the head is perpendicular to the tape travel.

**NOTE:** After this coarse adjustment is made, the adj. screws and the Head mounting nuts should be realigned according to electrical head alignment paragraph which follows in this Service Manual.

### 6-4 MIS-ALIGNMENT OF THE HEADS

Fig. 7-3 Head Mis-Alignment —Examples—

## 7. MEASUREMENT AND ADJUSTMENT —MECHANICAL—

### 7-1 PINCH ROLLER PRESSURE

**NOTE:** Pinch roller pressure is supplied by the pinch roller spring arm and it is most important that the solenoid plunger be fully bottomed before taking pressure measurement.

1. Load tape or block the shut-off arm in the ON position.
2. Attach a suitable spring scale to the pinch roller shaft.
3. Place the deck in the PLAY mode (▶), and holding the spring scale as illustrated, slowly draw it away from the pinch roller.
4. Do not allow the string to rub against the pinch roller.
5. Note the reading on the spring scale at the instant the pinch roller stops rotating.
6. The scale should indicate 2.3 to 2.5 kg (5.0 to 5.5 lbs). Optimum value is 2.4 kg (5.3 lbs).
7. If adjustment is necessary, loosen the 3 screws on the capstan solenoid and position the solenoid for optimum pressure.
8. Adjust solenoid-limit position so that the gap between capstan shaft and pinch roller is approx. 7 mm when solenoid is not actuated. Also make sure pinch roller shaft does not contact edit arm B. Limit is adjusted by loosening the mounting screw (A), then sliding limit until proper position is obtained.

Fig. 7-1 Pressure Measurement and Adj. Locations

### 7-2 BRAKE TORQUE

The brake torque is actuated mechanically. Pressure is set by the leaf spring force. While making these measurements and adjustments, be careful not to bend the brake bands. As brake torque will change with cleaning, brake drums and brake shoes should be cleaned only when absolutely necessary. If cleaning is required, use TEAC cleaner TZ-261 B. After cleaning, operate the brakes by depressing the play and STOP buttons several times to completely dry out the brakes before performing the following procedure.

**NOTE:** Brake adjustments are made with NO power connected to the equipment.

1. Place an empty large hub reel on the left reel table, and fasten one end of a 30" length of string to the reel anchor.
2. Wind several turns of string counter clockwise around the hub and attach a suitable spring scale to the free end of the string.
3. Take a reading only when the reel is in steady motion since the force required to overcome static friction will produce a false, excessively high initial reading.
4. The Calculated value should be 800 to 1200 g.cm (11 to 17 oz-in).
5. If adjustment is required, loosen the 2 screws shown and position the brake for optimum torque.
6. The adjustment of the right brake is the same, with the exception that rotation is clockwise. (wind string CLOCKWISE around reel hub)
7. See note at the top of page 11 for explanation of torque measurements.

Fig. 7-2 Torque Measurement and Adjustment Location

## TORQUE MEASUREMENT PROCEDURE

**NOTE:** The following torque measurements should be made with a spring scale that is calibrated to read Torque in gram-cm. for a 7" reel with a small reel hub. If the spring scale you are using is calibrated to read Force or Weight in grams the Torque must be calculated using the Formula:

$$\text{Torque (in g}\cdot\text{cm or oz}\cdot\text{in)} = \text{Weight or Force (in gm. or oz.)} \times \text{radius of hub (in cm or inches)}$$

If you are using a reel with other than the standard 2.5" or 6.0 cm (approx.) diameter hub, the Torque must be calculated using the same formula and substituting the actual radius and Weight or Force reading.

All Torque and Tension measurements must be made with the automatic shut-off switch (right tension arm) held in the ON position.

Brake Torque Measurement should be made using large hub reel with a hub diameter of 4" or 10.2 cm.

Fig. 7-3 Torque Measurement

### 7-3 TAKE-UP TORQUE

1. Place the empty reel and attached spring scale on the right reel table.
2. Place the deck in the Forward Play mode.
3. Allow the rotation of the reel to slowly draw the scale toward the hub.
4. Hold the spring scale with enough force to allow a steady reading.
5. The torque calculated value should be approx:  
370 to 410 g·cm (5.2 to 5.7 oz-inch)
6. Repeat the procedure for the Reverse play.  
430 to 470 g·cm (6.0 to 6.6 oz-inch)

### 7-4 BACK TENSION

1. Place an empty 7" reel with small hub on the left reel table, and fasten one end of a 30" length of string to the reel anchor.
2. Wind several turns of string counter-clockwise around the hub. Attach spring scale to string.
3. Place the deck in the Forward Play mode.
4. Pull the scale away from the reel against the motor torque with a steady, smooth motion.
5. Note the scale reading while it is in steady motion. (The string must not rub the reel flanges)
6. The calculated value should be approx.:  
170 to 210 g·cm (2.4 to 2.9 oz-inch)
7. Repeat the procedure for the Reverse Play.  
Using the right reel table. 180 to 220 g·cm (2.5 to 3.1 oz-inch)

#### Adjustment Location

If necessary, adjust slider of the resistors until you have the correct scale reading for optimum torque. Refer to adj. location below.

### 7-5 REEL HEIGHT ADJUSTMENT

Reel height adjustment is required only if a motor has been replaced or if tape rubs excessively against the reel. Adjustment is accomplished by FINE ADJ. screw in the reel turntable. Reel turntable height should be checked using standard 7" reels. With a tape threaded on the machine, position the reel height for smooth tape travel. If adjustment is necessary, remove the reel and adjust the screw. Then replace the reel and re-check the adjustment.

## 7-6 TAPE SPEED

The tape speed should be measured using TEAC flutter free tape, Model YTT-2003 (7-1/2 ips), YTT-2002 (3-3/4 ips). These tapes contain a highly accurate 3,000 Hz tone. Connect a digital frequency counter to either line OUTPUT jack. The indicated frequency should be 3,000 Hz  $\pm$ 30 Hz for both speeds and both directions.

## 7-7 WOW AND FLUTTER CHECK

**NOTE:** Before performing this measurement, clean the head and Tape run guides, also check pinch roller pressure, etc.

Use new Test Tape if possible for following adjustments.

Values obtained with different standards of equipment cannot be compared.

### PLAYBACK

1. Connect Test equipment to the unit as shown in Fig. 7-5. (Except oscillator).
2. Load TEAC YTT-2003 (for HIGH, 7-1/2 ips) or YTT-2002 (for LOW, 3-3/4 ips) and playback tape.
3. Read the indication on the Wow and Flutter meter.
4. The Wow and Flutter should be
  - 0.18% (RMS) for 7-1/2 ips
  - 0.20% (RMS) for 3-3/4 ips

### OVERALL

1. Connect Test equipment to the unit as shown in Fig. 7-5.
2. Load TEAC YTT-8003 (blank tape) Test Tape on the unit and Record a 3,000 Hz input signal.
3. Rewind and playback the recorded signal.
4. The reading on the Meter should be
  - 0.20% (RMS) for 7-1/2 ips
  - 0.25% (RMS) for 3-3/4 ips

**NOTE:** These figures apply to any tape position (such as full take-up reel, full supply reel or about mid-point). Also examine the tape counter ass'y for evenness of operation.

## 7-8 VOLTAGE AND FREQUENCY CONVERSION

This deck is adjusted to operate on an electric power source of the voltage and frequency specified on the reel tag and packing carton. If it is necessary to change the frequency or voltage requirements of this deck to match your area, use the following procedures.

Always Disconnect Power Line Cord before making these changes.

### Frequency Conversion: (only Export model)

1. Remove the right side wood panel (4 screws), then the rear/top metal panel (6 screws).
2. Set the power frequency selector slide switch (located next to the capstan motor) to the 50 or 60 position to match the power line frequency in your area.
3. Rotate the center (capstan) motor clockwise with your hand and re-position the belt onto the correct pulley as shown in the Motor Pulley Illustration below. The pulley can be seen by looking through the opening in the side panel. Continue to rotate the motor by hand approximately 10 revolutions to verify belt placement before replacing the side and rear covers.

Fig. 7-6 Frequency Conversion

### Voltage Conversion: (only Export model)

The deck may be set for 100, 117, 220 or 240 volts. To change the voltage unscrew the fuse in the center of the voltage selector plug. Pull out the plug and reinsert it so the desired voltage shows in the cutout. Reinstall the fuse specified on the label on the rear of the deck.

Fig. 7-7 Voltage Conversion

Fig. 7-5 Test Connections for Wow/Flutter and Tape Speed Test

## 8. MEASUREMENT AND ADJUSTMENT

### —ELECTRICAL—

NOTE: Before performing maintenance on this deck, thoroughly clean and demagnetize the entire Tape path, TEAC maintenance equipment to be used:

TEAC TZ-261 A/B for cleaning

TEAC E-3 for demagnetizing or equivalents

Service Data were determined using TEAC YTT Series Test Tape.

Procedure for checks and adjustments, unless otherwise indicated, are for the left channel at a tape speed of 3-3/4 ips (9.5 cm). The same procedures are to be applied to the right channel and again for both channels at 7-1/2 ips (19 cm) speed.

The deck must be matched to the voltage and frequency of your locality.

Most amplifier checks and adjustments can be made from the bottom with the (bottom) metal panel removed.

### 8-1 ADJUSTMENT LOCATIONS AND ADJUSTMENT POINTS

Ref. Nos Abv.	FOR	ADJUSTMENT (L/R)
1	P.B.EQ (HIGH)	VR101/103
2	P.B.EQ (LOW)	VR102/104
3	BIAS TRAP (For OUTPUT)	L201/202

## 8-2 ADJUSTMENT SEQUENCE CHART

Fig. 8-1 Adjustment Sequence Chart

## PLAYBACK PERFORMANCE

### 8-3 POWER SUPPLY CHECK AND ADJ.

1. Remove metal panel on Rear side of the deck for access to the electrical adjustments.
2. Depress power SW to ON.
3. Connect a VTVM between the Control P.C.B. Test Point No. 3 and ground. See Fig. 8-2 below.
4. Adjust VR-1 for +23 V DC.

Fig. 8-2 +23 V DC Test Point

1. Connect a VTVM to OUTPUT jacks.
2. Remove the head housing by removing 2 screws.
3. Thread the TEAC YTT-1002 Test Tape on the deck.
4. Play the 16 kHz/-10 dB Test tone in section 2 of the Test Tape.
5. Slowly rotate the azimuth Screw until maximum indication is achieved on VTVM.
6. Connect an oscilloscope to the OUTPUT jacks.
7. Adjust the azimuth screw (If necessary) until the oscilloscope shows that the signals are less than 45° out of phase at 10 kHz signal.
8. Secure this screw with a drop of locking paint.
9. Depress the ◀ button and turn azimuth adjustment screw Fig. 6-3 of the reverse playback head for maximum indication on the VTVM or scope.

Fig. 8-3 Head Alignment Fine Adjustment Set-up and Test Connections (PLAYBACK)

### 8-4 PLAYBACK HEAD AZIMUTH ADJ.

**NOTE:** Before proceeding with the following head alignments be sure that heads have been properly mounted as to HEIGHT, TILT and TANGENCY. See page 9.

— Fine Adjustment —

TAPE SPEED SW . . . 3-3/4 ips (9.5 cm)  
 OUTPUT SW . . . . . TAPE  
 METER SW . . . . . NORMAL

## 8-5 OUTPUT LEVEL SETTING

### – MAXIMUM OUTPUT LEVEL CHECK –

10. Play the 400 Hz/0 dB tone in section 1 of the Test Tape.
11. Turn the OUTPUT controls fully clockwise.
12. Adjust VR-201/203 for –2 dB (615 mV) at OUTPUT jacks.

### – SPECIFIED OUTPUT LEVEL SETTING –

13. Reduce both OUTPUT controls together until the lower reading channel reads –8 dB. (approx. 2 o'clock position).
14. If there is a difference in level between L-ch and R-ch, again adjust VR-201/203 (whichever is higher) for –8 dB (308 mV).

**NOTE:** This is the Specified Output level setting. Do not disturb this setting until the remaining adjustments have been completed.

Fig. 8-4 Specified Output Level Setting

## 8-6 VU METER LEVEL SETTING

15. Adjust VR-202/VR-204 for 0 VU (at NORMAL scale) reading on VU Meters, Set METER SW to HIGH. 0 VU should be read on HIGH scale.

## 8-7 FREQUENCY RESPONSE –PLAYBACK–

16. Thread TEAC YTT-1002 on the deck.
17. Play Tape and compare reading on VTVM with the response limits given in Fig. 8-5.
18. If adjustment is required, adjust VR-101/VR-103 for 3-3/4 ips (9.5 cm) speed.
19. Change Tape SPEED SW to 7-1/2 ips (19 cm) position.
20. Thread TEAC YTT-1003 on the deck.
21. Repeat Step 17.
22. If adjustment is required, adjust VR-102/VR-104 for 7-1/2 ips (19 cm) speed.

**NOTE:** If the frequency response does not meet specified response limits, especially at the high-end of the spectrum, head should be checked for accumulated dirt or oxides. If clean, head azimuth must be readjusted.

Fig. 8-5 Frequency Response – PLAYBACK –

## – REVERSE PLAYBACK HEAD CHECK –

Depress ◀ (Reverse Play) button and check for suitable output from both channels. If necessary adjust Height and azimuth adj screws (See Fig. 6-3) of Reverse Playback Head for best output.

## 8-8 SIGNAL-TO-NOISE RATIO –PLAYBACK–

1. OUTPUT controls should be at the Specified Output level settings.
2. Thread a YTT-1003 on the unit leaving the tape outside the capstan and pinch roller.
3. Hold the play supply reel stationary and depress the play (▶) button.
4. The VTVM connected to the OUTPUT jacks should indicate readings listed below.

**HIGH (7-1/2 ips) . . . . . 50 dB**  
**LOW (3-3/4 ips) . . . . . 48 dB**

## 8-9 HEADPHONE OUTPUT CHECK

1. Connect an 8 ohm non-inductive resistor across the headphone (PHONE) jack.
2. Connect VTVM across the resistor. VTVM should indicate –24 dB ± 2 dB (61 mV ~ 39 mV).

### 8-10 MONITOR LEVEL SETTING

#### OUTPUT SW . . . . . SOURCE

1. Turn LINE controls fully clockwise.
2. Apply a 400 Hz  $-18$  dB (97 mV) signal from AF oscillator to LINE IN jacks.
3. Adjust VR-301/VR-304 for  $-8$  dB (308 mV) at the OUTPUT jacks.

### 8-13 MIC INPUT LEVEL CHECK

This is check only. No adjustment is to be made.

1. Decrease LINE controls to minimum position.
2. Set MIC controls fully clockwise.
3. Apply a 400 Hz signal at  $-70$  dB (0.244 mV) to the MIC input jacks.
4. Check for  $-8$  dB (308 mV) level at OUTPUT jacks.
5. With  $-8$  dB (308 mV) at OUTPUT jacks, MIC input level should be  $-70$  dB  $\pm 2$  dB (0.194 mV  $\sim$  0.308 mV).
6. Return MIC controls fully counter clockwise to prevent noise insertion during following steps.
7. Reset the LINE controls, to the "Specified setting".

Fig. 8-7 Test Connections for Monitor Check

### 8-11 SPECIFIED LINE CONTROLS SETTING

4. Apply a 400 Hz  $-8$  dB (308 mV) signal from AF oscillator to LINE IN jacks.
5. Adjust LINE controls for  $-8$  dB (308 mV) at OUTPUT jacks.

**NOTE:** At this point both the line controls and OUTPUT controls are at the "Specified setting". Do not move these controls unless instructed in this procedure to do so.

The accuracy of many of the following adjustments and readings depends on these controls being at the "Specified setting".

### 8-12 VU METER LEVEL SET

6. Check VU Meters for 0 VU indication.
7. Adjust VR-302/VR-305 for 0 VU, if necessary.

### 8-14 BIAS TRAP ADJUSTMENT

OUTPUT SW . . . . . TAPE  
 RECORD MODE (L, R) SW . . . . ON  
 BIAS and EQ SW . . . . . 1  
 Select REC PAUSE mode

1. Remove all input signals.
2. Connect a VTVM or oscilloscope from ground to the junction of L-302 and C-314 (L-ch) and from ground to the junction of L-304 and C-329 (R-ch). See Fig. 8-8.
3. Adjust L-302 (L-ch) and L-304 (R-ch) for minimum reading on scope or VTVM.  
 Use Plastic alignment tool.

Fig. 8-8 Bias Trap Test Point

### 8-15 BIAS LEAKAGE CHECK

4. With Output control and Line controls at any positions Bias Leakage should be following value at OUTPUT jacks.  
 Spec. -40 dB (7.75 mV).  
 Check both the SOURCE and the TAPE position.

### 8-16 RECORD HEAD AZIMUTH ADJ.

Tape SPEED SW . . . . . 3-3/4 ips (9.5 cm)

**NOTE:** The effect of turning the azimuth screw will register on the VTVM. A slight delay will be noticed. Therefore, the screw must be rotated slightly with a pause to see the effect.

—Fine Adjustment—

5. Connect a VTVM to the OUTPUT jack and an AF oscillator to the LINE IN jack.  
 Set the oscillator to 10 kHz at -18 dB (97 mV).
6. Begin recording (Depress REC and PLAY buttons).
7. While recording, adjust the azimuth screw for maximum reading on the VTVM.

**NOTE:** It is absolutely essential to accomplish the above adjustment before performing the following adj. to avoid phase errors greater than 45°.

8. Sweep the oscillator frequency from 50 Hz to 10 kHz (for 7-1/2 ips), 50 Hz to 7.5 kHz (for 3-3/4 ips) and check that phase difference between channel is 45° or less.
9. Secure the screw with insulating locking paint.

Fig. 8-9 Test Connection for Recording Check

### 8-17 BIAS ADJUSTMENT

Be sure the Bias Trap has been adjusted per section 8-14 before proceeding.

10. Apply 7 kHz signal at -18 dB (97 mV) to the LINE IN jacks.
11. While recording on the YTT-8003 Test Tape, adjust capacitor VC-401/VC-402 for peak reading on the VTVM, then turn the capacitor clockwise until a decrease of 2.5 dB "over-bias" from the peak is obtained.

BIAS and EQ SW . . . . . 2

12. Apply 400 Hz signal at -18 dB (97 mV) to the LINE IN jacks.
13. While recording on the YTT-8023 Test Tape, adjust VR-401 (both chan.) for an Over-Bias of 0.5 dB from the peak.

Bias Limits Chart

### 8-18 RECORD LEVEL SET

14. Apply 400 Hz signal at  $-8$  dB (308 mV) to the LINE IN jacks.  
Be sure the Line and Output controls are still at their previously set positions.
15. Begin recording.
16. Adjust VR-303/VR-306 for  $-8$  dB (308 mV) at OUTPUT jacks.

### 8-19 FREQUENCY RESPONSE –OVERALL–

**NOTE:** To avoid saturation of the tape these checks should be made at least 20 dB below the specified input level.

Any Bias signal feeding into the test equipment should be filtered out by adjusting the external Bias Trap.

**BIAS and EQ SW** . . . . . 1  
**Tape SPEED SW** . . . . . 3-3/4 ips (9.5 cm)

19. Apply signal swept from 40 Hz to 16 kHz,  $-28$  dB (30.8 mV) to the LINE IN jacks and record on a blank TEAC YTT-8003 Test Tape.
20. During recording, monitor the Tape signal and adjust equalization L-301/L-303 for readings within the Response Limits charts. See Fig. 8-10 below.
21. Change the Tape SPEED SW to HIGH position.
22. Apply signal swept from 40 Hz to 24 kHz,  $-28$  dB (30.8 mV) and while monitoring the off-the-Tape signal check for readings within the Response Limits charts. See Fig. 8-10 below.

Fig. 8-10 Frequency Response – OVERALL – 1

**BIAS and EQ SW** . . . . . 2

23. Apply signals swept from 40 Hz to 14 kHz to the unit while recording on a blank TEAC YTT-8023 Test Tape.
24. Repeat the above procedure for HIGH, using a signal swept from 40 Hz to 22 kHz. Refer to Response Limits in Fig. 8-11 below.

**NOTE:** If the response is not uniform, the head should be cleaned of accumulated oxide and dirt. Then repeat the Bias adjustment procedure by VR-401 (both channel).

Fig. 8-11 Frequency Response – OVERALL – 2

### 8-20 SIGNAL-TO-NOISE RATIO –OVERALL–

1. Output and Line controls should be at the specified positions.
2. Remove the AF oscillator from the LINE IN jacks.
3. Place the deck in the Record mode with “no signal” applied. Note the point on the index counter where recording begins.
4. Rewind the tape (YTT-8003) to the beginning point and play it back.
5. The noise level as indicated on the VTVM should be readings listed below.

**HIGH (7-1/2 ips)** . . . . .  $-56$  dB  
**LOW (3-3/4 ips)** . . . . .  $-54$  dB

6. This  $-56$  dB/ $-54$  dB corresponds to the Signal-To-Noise Ratio of 48 dB/46 dB (minimum): the difference between residual noise of  $-56$  dB/ $-54$  dB and the specified output level  $-8$  dB.  $-8$  dB reference level is also applicable following measurements.

### 8-21 OPTIMUM ERASURE MEASUREMENT

Tape SPEED SW . . . . . 7-1/2 ips (19 cm)

1. Thread the TEAC YTT-8003 Test Tape on the unit.
2. Apply a 1 kHz signal at 10 dB above the operating level of -8 dB (975 mV) to the LINE IN jack.
3. Make a 30 seconds recording of the above signal while reading and noting the level of output, then rewind to beginning of this recording.
4. Disconnect the 1 kHz signal source (AF oscillator) from the LINE IN jack.
5. Connect a VTVM to the OUTPUT jack, through a 1 kHz Narrow Band Pass Filter.
6. Put deck in the Record mode and "record" (erase) over this previous recording, then rewind to beginning again.
7. Put deck in Play mode and monitor the output on the VTVM.
8. Difference in output level, between the 1 kHz signal and the "no signal" section level should be more than 68 dB.

**NOTE:** Filter loss should be considered.

Fig. 8-12 Test Connections for Erase measurement

### 8-22 CHANNEL SEPARATION

1. Be sure tape is completely bulk erased prior to doing these checks.
2. Apply a 1 kHz signal at -8 dB (308 mV) to L chan.
3. Place deck in Record mode.
4. While recording measure the OUTPUT on R chan. VTVM connected through a 1 kHz Band Pass Filter. Spec. should be 50 dB.

Fig. 8-13 Test Connections for Channel separation check

### 8-23 CROSS TALK REJECTION (TRACK TO TRACK)

Following is the measurement procedure at 7-1/2 ips using the TEAC standard tape, Type YTT-8023:

1. Thread a blank tape or the YTT-8023 tape on the unit.
2. Apply a 125 Hz signal at -8 dB (308 mV) to the right and left channel LINE IN jack.
3. Make a 30 second recording of the 125 Hz signal.
4. Interchange the left and right reels and rethread tape on the unit.
5. Connect a VTVM to the right channel OUTPUT jack.
6. Playback the recorded signal portion of tape and monitor the level on the VTVM.
7. The reading should be 4 8 dB.
8. Spec. should be 40 dB.

### 8-25 DISTORTION CHECK

Tape SPEED SW . . . . . 7-1/2 ips (19 cm)  
BIAS and EQ SW . . . . . 1

9. Thread the TEAC YTT-8003 Test Tape on the unit.
10. Apply a 1 kHz signal to LINE IN jacks.
11. Place the deck in the record mode for about 10 seconds. Rewind and play this recorded section of the tape.
12. Read the indicated value on the distortion analyzer.
13. The distortion factor should be 1.5 %.

Fig. 8-14 Test Connections for Distortion check

## 9. TROUBLE-SHOOTING-1

**NOTE:** The following guide lists specific difficulties that could occur in the A-4300SX. Possible causes are listed for each malfunction. Visually inspect the unit for any damage such as broken or burned components or wiring, loose connections, etc.

### MECHANICAL

MALFUNCTION	POSSIBLE SOURCE OF TROUBLE
• Fuse burns out (blows) when power applied	→ Faulty C6, D3 or D4
• Capstan motor fails to rotate when Tension Arm is raised	→ SW2 or motor defective → Drive belt off or slipping
• Transport inoperative in Forward Playback or Fast Forward	→ Remote Control dummy plug missing or loose → Faulty K4 or associated parts
• Either reel motor inoperative in playback but OK in Fast Forward	→ Defective tap on wirewound Resistor → Shorted motor capacitor or wiring → Associated circuit parts
• Both reel motors operate with high torque in Fast Forward mode	→ Defective CR16, CR17
• Excessive Crosstalk	→ Head alignment improper → Faulty K8 or associated parts
• Counter Repeat operation faulty	→ Defective Counter SW-10 to SW-11, K3, K7
• Auto Reverse sensing inoperative	→ Faulty K6, Q5, Q6 or associated parts
• Reverse mode inoperative	→ Faulty K3, K5 or associated parts
• Wow-Flutter excessive (irregular tape movement)	→ Improper pinch roller pressure → Oily or defective belt → Back tension too high
• Pinch Roller fails to engage completely	→ Faulty solenoid → Defective Q3, Q4, K8 or associated parts

## 9. TROUBLE-SHOOTING-2

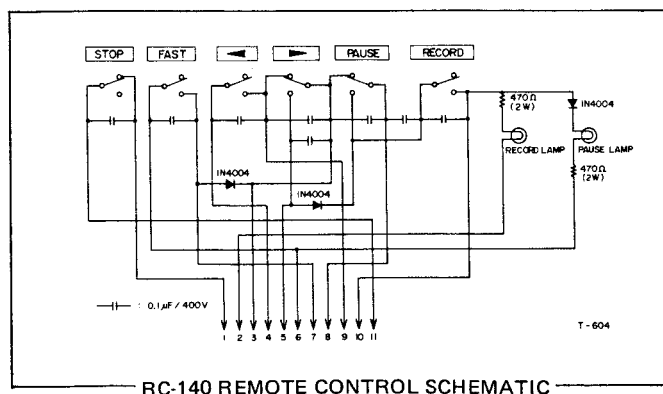

**NOTE:** Reference numbers given for the Amplifier section are Left channel designations. Refer to the schematic diagrams Right, for channel reference numbers.

Prefix letters indicate:

C: Capacitor	D: Diode
Q: Transistor	CR: Spark Killer (Cap.)
K: Relay	SW: Switch

### ELECTRICAL

MALFUNCTION	POSSIBLE SOURCE OF TROUBLE
● Amplifier inoperative	Defective Q1, Q2 or associated parts
● Playback audio intermittent or absent	
a) If SOURCE Monitor function normal	Play head plug loose or disconnected Q101, Q102, Q103 or associated parts
b) If SOURCE Monitor function inoperative	Grounding strap loose or disconnected from the power amplifier PC Board Faulty Q201, Q202 or the associated parts
● VU Meter inoperative in TAPE MONITOR mode (OUTPUT Switch at SOURCE)	Defective monitor switch Q203 or associated parts
● VU Meter inoperative in SOURCE monitor mode (OUTPUT Switch at TAPE)	Defective monitor switch Q309 or associated parts
● VU Meter inoperative in both modes	Faulty meter or wiring
● Will not record and RECORD Indicator lamp illuminates	
a) No erase action	Faulty Q401, Q401, Q402 or associated parts
b) VU Meter SOURCE monitor function normal	Dirty Record head Defective Q301 or associated parts
● Will not record and RECORD Indicator lamp does not illuminate	RECORD-MODE switch Faulty K401

## 10. SERVICING AND MAINTENANCE

### 10-1 CLEANING:

TEAC TZ-261A for Head cleaning and TZ-161B for Rubber cleaning should be used. Use for following places.

TZ-261A	TZ-261B
Pinch roller rubber	Motor pulley
Capstan belt	Heads, Brake drums
Counter belt	Capstan shaft
	Tape run guides

### 10-2 LUBRICATION:

Under normal operating conditions, lubrication is required only once each year. Before lubricating, clean the drive belt and drive pulley... etc. Operate the deck for 30 minutes to 1 hour immediately prior to oiling. After oiling, keep the deck in the upright position for 3 to 4 hours to allow thorough absorption of the oil.

Approximately once each year or after 2000 hours of use, apply TEAC TZ-255 Lubricating Oil to the following places only;

- Pinch roller shaft . . . . . 1 drop
- Capstan shaft . . . . . 2 drops  
(Remove the dust cap for access to the oil pit)
- Capstan motor . . . . . 0.5 cc  
(Maximum to fill oiling tube)

**NOTE:** Apply 3 or 4 drops at a time through the oiling tube. The oil level can be seen to drop as the felt material in the motor bearings absorb oil. When the level ceases to drop, no more oil is needed. Do not attempt to force oil into the motor nor exceed the maximum.

Excessive oiling will scatter oil inside the deck. This oil will cause drive belt slippage and other difficulties. Check for slippage and clean all parts inside the deck before operating after lubrication. Check for oil emission after operation and before returning deck to the customer.

Fig. 10-1 Capstan Motor Oiling Point

Fig. 10-2 Capstan Shaft and Pinch Roller Shaft Oiling Points

### 10-3 TEAC MAINTENANCE FLUIDS

Fig. 10-3 TZ-255 Oil kit

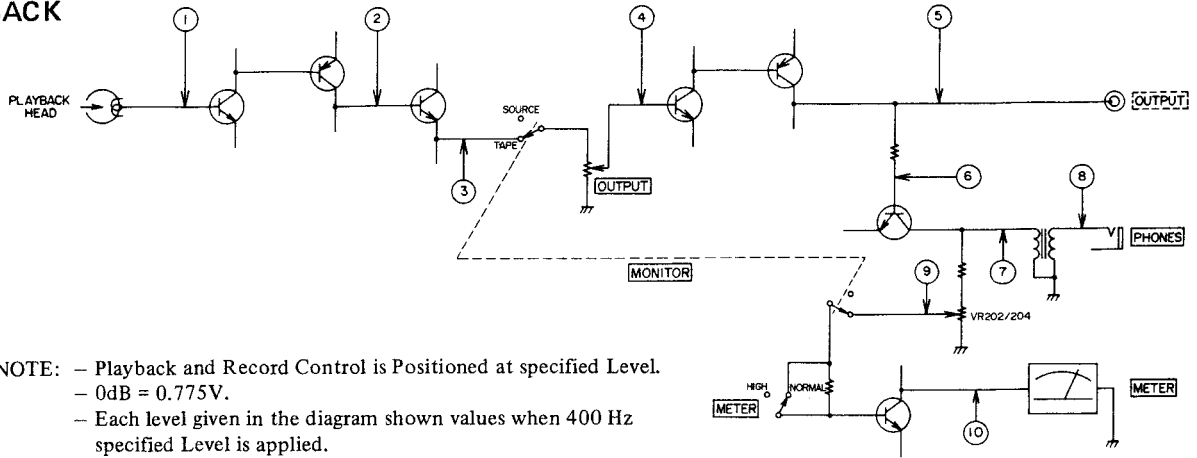

Fig. 10-3 TZ-261 Tape Recorder Kit

### 10-4 DEMAGNETIZATION OF HEADS

If the record or Playback heads becomes magnetized, noise will increase and tonal fidelity will deteriorate. For this reason it is advisable to use non-magnetic tools when working near the heads. If the heads have had any contact with current or magnetized metal parts, demagnetize them with a TEAC E-3 eraser or Equivalent.

# 11. SIMPLIFIED SCHEMATIC with level indications

## PLAYBACK

NOTE: - Playback and Record Control is Positioned at specified Level.  
 - 0dB = 0.775V.  
 - Each level given in the diagram shown values when 400 Hz specified Level is applied.

### PARTS ORDERING INFORMATION

Spare parts are available through your nearest TEAC Authorized Service Center or directly from the TEAC office, the address of which is written on the back cover. When ordering parts, always include the following information:

- |              |                    |
|--------------|--------------------|
| 1. MODEL     | 4. DESCRIPTION     |
| 2. REF. NO.  | 5. UNIT SERIAL NO. |
| 3. PARTS NO. | 6. MANUAL CODE NO. |

#### NOTICE REGARDING PARTS ORDERS

1. Do not order by only REF. NO.
2. In some instances, individual minor parts are not available. In such a case, the entire assembly including the part requested will be sent to you.
3. Parts are identical between the different models with the exceptions as coded by the designations in the REMARKS column.
4. PC Boards shown viewed from foil side.
5. Parts marked with \*require longer delivery time than regular parts.

## PARTS LIST-3

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
3 - 1	55021160	Panel Assy, Ampl.; Trim	JAPAN
	55021170	Panel Assy, Ampl.; Trim	All except JAPAN
3 - 2	* 55501123	Chassis, Ampl.	
3 - 3	50581481	VU Meter	
3 - 4	55440581	Knob, Upper	JAPAN
	55340910	Knob, A	All except JAPAN
3 - 5	55040341	Knob, Lower	JAPAN
	55444270	Knob, B	All except JAPAN
3 - 6	55400821	Lock Nut	JAPAN
3 - 7	55200610	Wave Washer	JAPAN
3 - 8	55300750	Guide, Memory Marker	JAPAN
3 - 9	50537100	Var. Res., 10k ohm A x 2	
3 - 10	50537090	Var. Res., 100k ohm A x 2	
3 - 11	* 55040810	Cover, Lamp (Red)	Part of 3-1
3 - 12	* 55040640	Cover, Lamp (Green)	Part of 3-1
3 - 13	50414650	Lamp, w/Leads	JAPAN
3 - 14	51340180	Button	JAPAN
3 - 15	55501280	Mask, Switch	JAPAN
3 - 16	* 55547340	Bracket, Switch; B	JAPAN
3 - 17	* 51683321	PC Board Assy, Record Muting	JAPAN
3 - 18	* 51340170	Switch, Push	JAPAN
3 - 19	* 55530162	Bracket, Switch	JAPAN
3 - 20	* 55547400	Holder, PC Board	JAPAN
3 - 21	50253530	Button, D	
3 - 22	50253880	Mask, Switch	
3 - 23	50443902	Switch Assy	
3 - 24	* 50332671	Spacer, Insulator Paper	
3 - 25	* 55547330	Bracket, Switch; A	
3 - 26	51340180	Switch, Push	JAPAN
3 - 27	51340090	Switch, Push; Power	
3 - 28	50529050	Spark Killer 0.1 mfd + 120 ohm 400 VAC	JAPAN, GENERAL EXPORT
	50529060	Spark Killer 0.033 mfd + 120 ohm 400 VAC	U.S.A., CANADA
3 - 29	* 55300760	Insulator Mask, Jack	
3 - 30	* 55810420	Nut, MH	
3 - 31	* 55300771	Bracket, Jack Mounting	
3 - 32	50432450	Jack, Phone; 3 Cond.	
3 - 33	50430240	Jack, Phone; Single	
3 - 34	50237300	Rubber Protector, P	
3 - 35	50237201	Button, A	
3 - 36	55300721	Button, FAST	
3 - 37	55300741	Button, PAUSE	
3 - 38	50237221	Button, STOP	
3 - 39	55300731	Button, REC	
3 - 40	* 50237290	Nut Plate, Control	
3 - 41	* 55340430	Hinge, A	
3 - 42	* 50332720	Plate, Hinge Adjusting	
3 - 43	* 50253870	Plate, Retaining	
3 - 44	* 55340440	Hinge, B	
3 - 45	* 55400840	Spacer, A	
3 - 46	50446560	Switch, Micro; VV-15-1A	
3 - 47	* 50237160	Spacer	
3 - 48	50446570	Switch, Micro; VV-15-2A	
3 - 49	50446580	Switch, Micro; VV-15-3A	
3 - 50	* 51683350	PC Board Assy, Control	
3 - 51	* 55501221	Bracket, PC Board Reinforcing; L	
3 - 52	* 55501232	Bracket, PC Board Reinforcing; R	
3 - 53	55300800	Button, OUTPUT	JAPAN
3 - 54	50443960	Switch, Push	
3 - 55	* 55501192	Plate, Lever Switch	JAPAN
3 - 56	55500790	Mask, Lever Switch	
3 - 57	50447210	Switch, Lever; 4PDT	
3 - 58	50447220	Switch, Lever; DPDT

## PARTS LIST-4

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
4 - 1	* 55021090	Panel, Rear Connection	JAPAN
	* 55021140	Panel, Rear Connection	All except JAPAN
4 - 2	* 55501270	Angle, PC Board	
4 - 3	* 50436720	Connector, Plug; 28P	
4 - 4	* 50436730	Connector, Socket; 28P	
4 - 5	* 51683690	PC Board Assy, Timer	JAPAN
4 - 6	* 55540681	Bracket, PC Board; P	JAPAN
4 - 7	50436580	Jack, Pin; 4P	
4 - 8	* 50452060	Terminal Strip, 1L-2P	
4 - 9	* 50233530	Plate, DIN Connector	
4 - 10	50430010	Connector, DIN	
4 - 11	55501151	Adaptor, Fuse Holder	All except GENERAL EXPORT
4 - 12	* 50924500	Holder, Fuse	JAPAN
4 - 13	50411140	Fuse, 2A	JAPAN
	50411140	Fuse, 2A (100V/117V area)	GENERAL EXPORT
	50411010	Fuse, 1A (220V/240V area)	GENERAL EXPORT
	50411440	Fuse, 2A; UL	U.S.A., CANADA
4 - 14	50432700	Socket, 11P	
4 - 15	50433001	Dummy Plug, 11P	
4 - 16	* 50454071	Post, Grounding	
4 - 17	* 51681343	PC Board Assy, Bias Oscillator	
4 - 18	* 55501240	Angle, PC Board	
4 - 19	* 50233760	Plate, PC Board	
4 - 20	* 50491443	PC Board Assy, Record/Meter Ampl.	JAPAN
	* 51683420	PC Board Assy, Record/Meter Ampl.	All except JAPAN
4 - 21	* 50491432	PC Board Assy, Line Out/Phone Ampl.	
4 - 22	* 50491424	PC Board Assy, Playback EQ/MIC Ampl.	
4 - 23	* 55300470	Strain Relief, AC Power Cord	
4 - 24	51280270	Cord, AC Power	JAPAN
	* 50471652	Cord, AC Power	GENERAL EXPORT
	50471661	Cord, AC Power	U.S.A., CANADA
4 - 25	* 50435030	Voltage Selector	GENERAL EXPORT
4 - 26	* 50412280	Holder, Fuse	U.S.A., CANADA

## PARTS LIST-2 (Continued from page 5.)

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
2 - 54	50616691	Solenoid Assy, Pinch Roller	
2 - 55	50529050	Spark Killer, 0.1 mfd + 120 ohm 400 VAC	
2 - 56	50422570	Diode, SIB01-06	
2 - 57	50275690	Cushion, Rubber	
2 - 58	* 50141842	Limit Stop, Pinch Roller	
2 - 59	50220441	Spring, Return	
2 - 60	* 55501320	Plate, Lifter	
2 - 61	55000740	Arm Assy, Lifter; R	
2 - 62	50152501	Shaft, Lifter Arm	
2 - 63	* 50221100	Spring, A	
2 - 64	55000730	Arm Assy, Lifter; L	
2 - 65	* 55340410	Clamp, Wire; A	

## PARTS LIST-3 (Continued from page 7.)

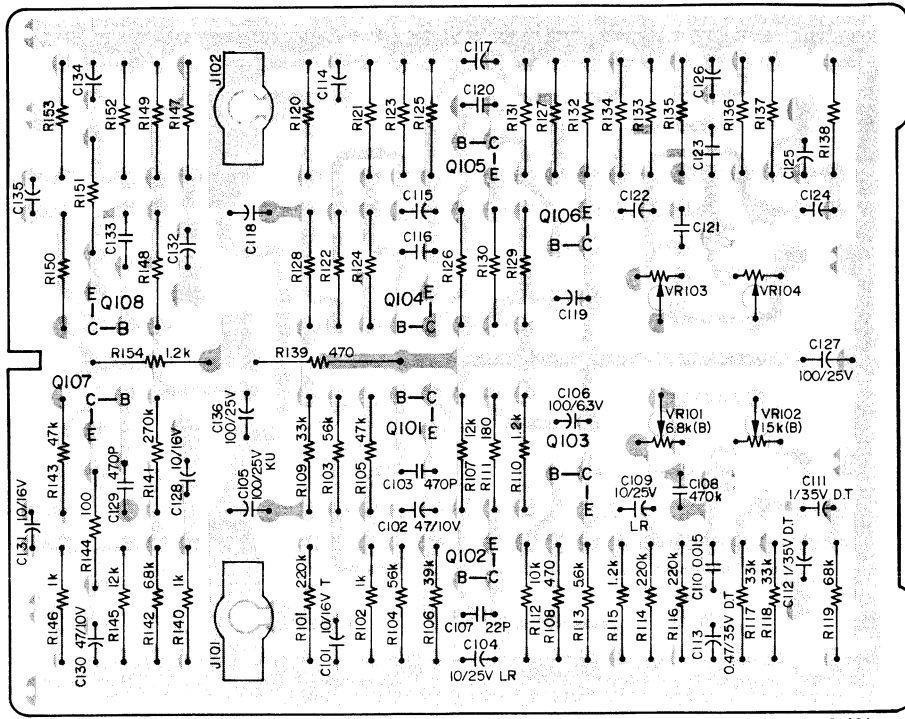

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
3 - 59	* 50939280	Clamp, Wire; B	
3 - 60	* 50419070	Sleeve, Lamp	All except JAPAN
3 - 61	50414580	Lamp, Bayonet Type (8V)	All except JAPAN
3 - 62	* 55501170	Bracket, Lamp Socket Support	All except JAPAN
3 - 63	50415250	Socket, Lamp	All except JAPAN
3 - 64	* 55501181	Bracket, Switch	All except JAPAN
3 - 65	* 55547600	Plate, Lever Switch; A	All except JAPAN
3 - 66	51340200	Switch, Push; 2-Gang	All except JAPAN
3 - 67	55340140	Button	All except JAPAN

## INCLUDED ACCESSORIES

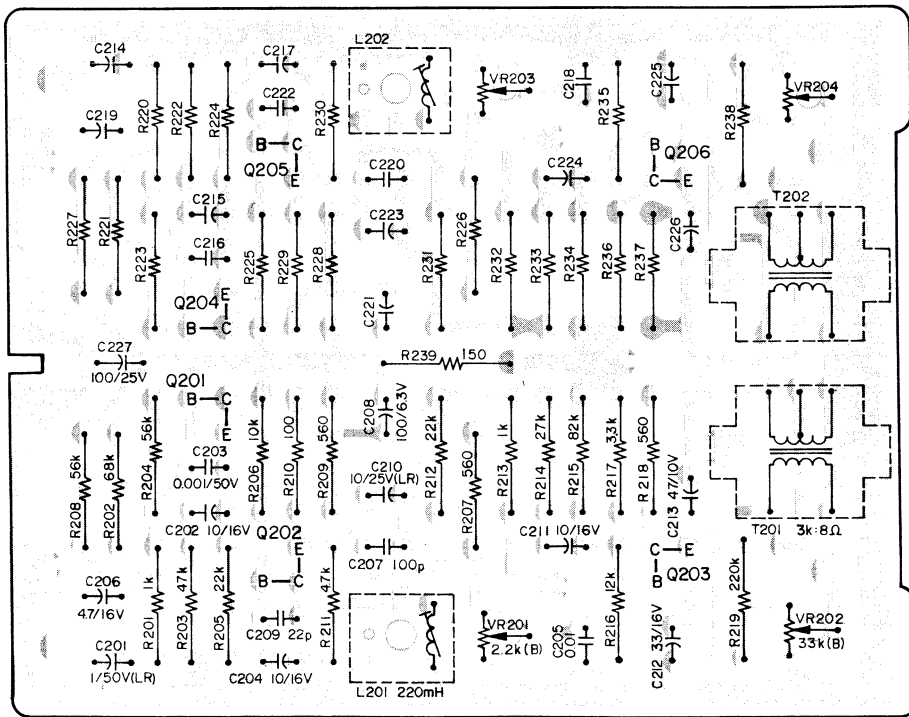

REF. NO.	PARTS NO.	DESCRIPTION	REMARKS
	* 51280010	Cords, Input-output Connection, 2 used	
	* RE-702	Empty Reel, 7 inch Small Hub	
	* 57100300	Cleaning Stick (TZ-275)	
	* 50291350	Silicone Cloth	
	* 50291860	Oil and Applicator	
	* 50276971	Rubber Feet (For Horizontal Use)	
	* 50629620	Splicing Tape	
	* 50272880	Sensing Foil	
	* 50411010	Fuse, 1A (220V/240V area)	GENERAL EXPORT
	* 50411140	Fuse, 2A (100V/117V area)	GENERAL EXPORT
	* 50411440	Fuse, 1A-250V UL	U.S.A., CANADA
	* 51014020	A-4300SX Owner's Manual	JAPAN
	* 51014040	A-4300SX Owner's Manual	GENERAL EXPORT
	* 51014030	A-4300SX Owner's Manual	U.S.A., CANADA
	* 51013371	Information Supplement (Open Reel)	U.S.A., CANADA

# ASSEMBLING HARDWARE CODING LIST

All screws conform to ISO standards, and have crossrecessed heads, unless otherwise noted. ISO screws have the head inscribed with a point as in the figure to the right.

FOR EXAMPLE:

\* Inner dia. for washers and nuts

	Code	Name	Type		Code	Name	Type
MACHINE SCREW	<b>R</b>	Round Head Screw		TAPPING SCREW	<b>BTA</b>	Binding Head Tapping Screw(A Type)	
	<b>P</b>	Pan Head Screw			<b>BTB</b>	Binding Head Tapping Screw(B Type)	
	<b>T</b>	Stove Head Screw (Truss)			<b>RTA</b>	Round Head Tapping Screw(A Type)	
	<b>B</b>	Binding Head Screw			<b>RTB</b>	Round Head Tapping Screw(B Type)	
WOOD SCREW	<b>F</b>	Flat Countersunk Head Screw		SETSCREW	<b>SF</b>	Hex Socket Setscrew(Flat Point)	
	<b>O</b>	Oval Countersunk Head Screw			<b>SC</b>	Hex Socket Setscrew(Cup Point)	
	<b>RW</b>	Round Head Wood Screw			<b>SS</b>	Slotted Socket Setscrew(Flat Point)	
SEMS SCREW	<b>FW</b>	Flat Countersunk Wood Screw		WASHER	<b>E</b>	E-Ring (Retaining Washer)	
	<b>OW</b>	Oval Countersunk Wood Screw			<b>W</b>	Flat Washer (Plain)	
SEMS SCREW	<b>BSA</b>	Binding Head SEMS Screw(A Type)		<b>SW</b>	Lock Washer (Spring)		
	<b>BSB</b>	Binding Head SEMS Screw(B Type)		<b>LWI</b>	Lock Washer (Internal Teeth)		
	<b>BSF</b>	Binding Head SEMS Screw(F Type)		<b>LWE</b>	Lock Washer (External Teeth)		
	<b>PSA</b>	Pan Head SEMS Screw(A Type)		<b>TW</b>	Trim Washer (Countersunk)		
	<b>PSB</b>	Pan Head SEMS Screw(B Type)		NUT	<b>N</b>	Hex Nut
