

Clock Controlled Tones for Multiple Schedules

The CTG-1 can not provide a different tone schedule for each day of the week, but the 24 hour tone schedule can be programmed to only produce tones on certain days. Multiple CTG-1's can be combined for the school and business applications that require different tone schedules. A typical school application with three different tone schedules in a week is shown below. In this example, one schedule of tones for Monday and Wednesday, a second schedule of tones for Tuesday and Thursday, a third schedule of tones for Friday and no tones on Saturday or Sunday. Up to seven CTG-1's can be combined to provide a separate schedule for each day of the week.
