**WARNING:** Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

**IMPORTANT:** The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

**WARNING:** Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

**IMPORTANT:** Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

## ■ TO SERVICE PERSONNEL

1. Critical Components information.  
Components having special characteristics are marked  $\triangle$  and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Model only).  
When service has been completed, it is imperative that you verify that all exposed conductive surfaces are properly insulated from supply circuits.
  - Meter impedance should be equivalent to 1500 ohm shunted by 0.15  $\mu$ F.
  - Leakage current must not exceed 0.5mA.
  - Be sure to test for leakage with the AC plug in both polarities.

## 2. BEGINNING AND CANCELLATION

### (1) STARTING UP THE FUNCTION AND THE DISPLAY

There are two ways to start up. One is by using the front panel keys, another is by using the remote control transmitter. After starting up, the menu No. 1 is worked.

#### A. How to start test mode

There is a method of starting the self-diagnosis function.

Using the keys on the main unit:

Hold down the "INPUT MODE" and "FM/AM" keys simultaneously, and press the "STANDBY/ON" key; submenu No. 1 of diagnosis main menu No. 1 will start.

#### B. Settings for start-up of diagnostic program

The settings used when starting the diagnostic program are as follows.

##### 1. EFFECT LEVEL :

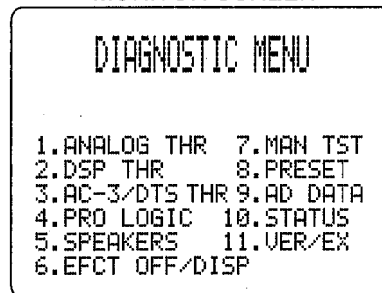

CHANNEL	CENTER	R SUR.	L SUR.	SWFR
LEVEL (dB)	0	0	0	0

- 2. MUTING : OFF
- 3. INPUT (VIDEO) : DVD/LD (DVD/LD)
- 4. CENTER SPEAKER : LARGE
- 5. REAR SPEAKER : LARGE
- 6. MAIN SPEAKER : LARGE
- 7. LFE/BASS OUT : SWFR

#### C. Start-up display

The diagnostic menu list appears on the monitor screen and the information of the protection function appears on the front panel display of the main unit.

#### MONITOR SCREEN

On the FL display of the main unit, an opening message (or the history of the protection) appears for 2 seconds before the diagnostic menu No.1 MAIN BYPASS.

### ● FL display at start-up of diagnostic program

When the diagnostic program has started, the history (\*2) of the protection function (\*1) is displayed. If the protection function has been activated in the past, the type and voltage value are displayed. After a few seconds the diagnosis function menu will appear.

(\*1) If some faulty condition is detected in the excess current, the power source or the DC, the power will be turned off automatically.

(\*2) The protection records will be cleared when "PRESET RSRVD" is selected in diagnosis menu No. 8 and FACTORY PRESET is engaged.

### ● History of protection function

Each case of the history of the protection function is displayed as shown below.

```
CHK SUM:XXXX X
```

Main microprocessor check sum (4-digit, hexadecimal) and version (one letter) display

\* Used when checking on-board writing to main microprocessor.

```
I PROTECTION
```

Appears when the current protection function is operating.

When power is turned on in an abnormal status, the power relay will come on, protection will operate immediately, and power will turn off.

```
PS PRT : XX%
```

Appears when the power protection function is operating.

For the % value, the voltage at that point is shown by 5V/100%. When power is turned on in an abnormal status, power will turn off after half a second.

```
DC PRT : XX%
```

Appears when the power amp DC protection function is operating.

For the % value, the voltage at that point is shown by 5V/100%. When power is turned on in an abnormal status, power will turn off after two seconds.

```
TMP PRT : XX%
```

Appears when the heat sink thermal protection function is operating.

For the % value, the voltage at that point is shown by 5V/100%. When power is turned on in an abnormal status, power will turn off after one second.

## (2) EXITING METHOD

The diagnosis function can be exited by any of the following procedures. Take care with the setting of backup memory initialization menu (diagnosis No. 8) when exited the diagnosis function:

1. Select diagnosis menu No. 11/submenu No. 6 "EXIT".
2. Press the "STANDBY/ON" key on the main unit or "STANDBY" key on the remote control to turn power off.

### 3. OPERATION AND DISPLAY WHEN STARTING DIAGNOSIS FUNCTION

#### (1) Selection of diagnostic menu

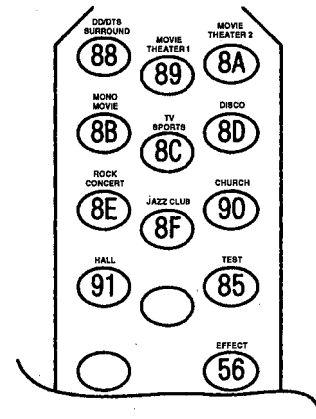

The diagnostic menu and the sub-menu can be selected by using the front panel keys of the main unit or the remote control unit.

##### ● Selection by using the front panel keys

The main menu can be changed cyclically by using the "TUNING UP/DOWN" keys; and the submenu, by using the "PROGRAM +/-" keys. The "+" or "UP" key will increase the main or submenu number.

##### ● Selection by using the remote control unit

The remote control codes in the menu list (on page 8) correspond to the DSP program, test and effect keys. See the figure on the right.

#### (2) Display during Menu Operation

During diagnosis function, the diagnostic menu will appear on the superimposed screen, except for main menu No. 6. As a rule, the main menu No. and submenu No. will appear in the FL display.

#### (3) Other functions available while diagnosis function is active

Listed below are the other functions available while the diagnosis function is active.

- Selecting input source (Tape monitor/Ext. decoder)
- Adjusting effect level (Center, Rear, Sub-woofer)
- Adjusting master volume
- Muting on/ off
- Tuning power off

#### (4) Diagnosis default status

When not otherwise specified, default settings and values in each menu are as follows:

- All "SPEAKERS" : LARGE
- ALL electronic VRs : 0dB
- D-RANGE : MAX
- LFE LEVEL : 0dB
- CENTER DELAY : 0ms

## 4. CONTENTS OF DIAGNOSIS FUNCTION

This section describes the contents of the self diagnosis function in detail.

### (1) ANALOG THROUGH

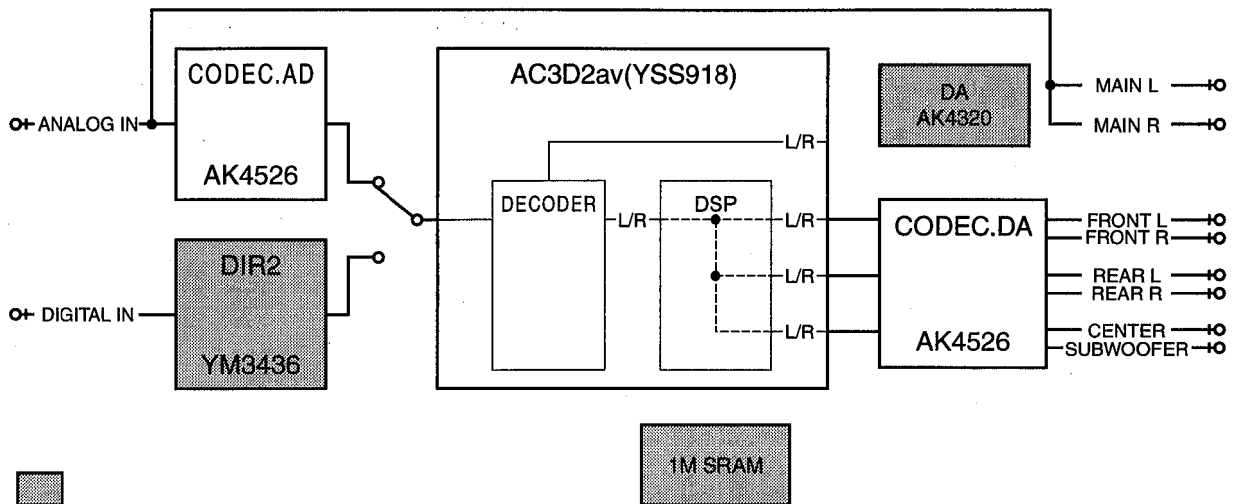

The input is fixed to analog (A/D). There are two submenus.

#### 1. MAIN BYPASS

The MAIN L/R signals bypass the analog circuits to be output.

For C/LFE, FL/FR and RL/RR, the MAIN L/R signals via the DSP are output without being processed (through).

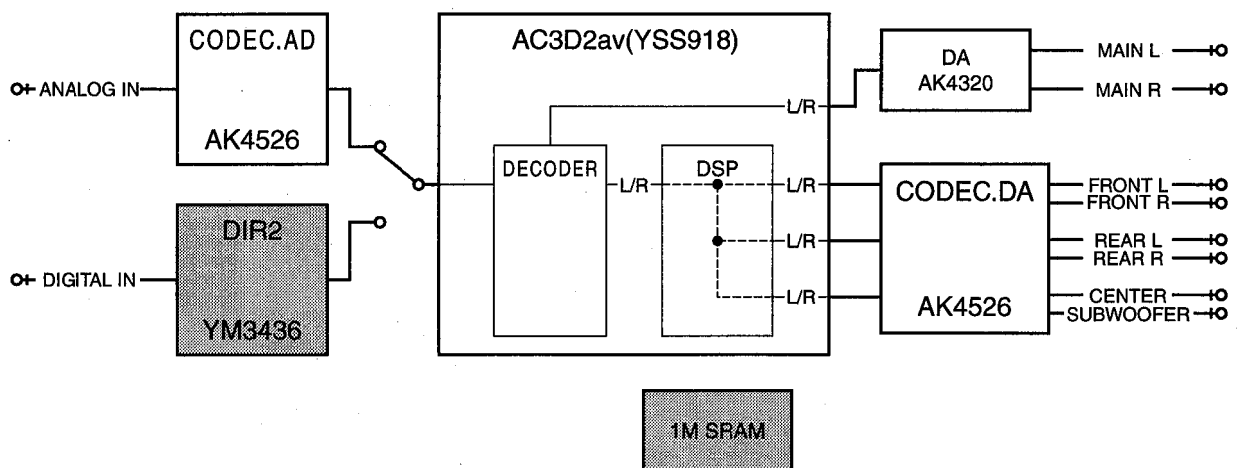

(Remote control code 7A-88 : DSP/1)

This shows that the device is not operating.

#### 2. DSP 0dB

MAIN L/R, C/LFE, FL/FR and RL/RR pass through the DSP without being processed.

**(2) DSP THROUGH**

The input is automatically discriminated by signal detection and switched with priorities AC3>DTS>PCM AUDIO>analog. There are the following three submenus.

**1. YSS918-SRAM**

MAIN L/R are input to the DSP via AC3D2av, pass through SRAM, and are then output to all channels without being processed. (Remote control code 7A-89 : DSP/2)

**2. YSS918**

MAIN L/R are input to the DSP via AC3D2av, and then output to all channels without being processed.

**3. DSP FULL BIT**

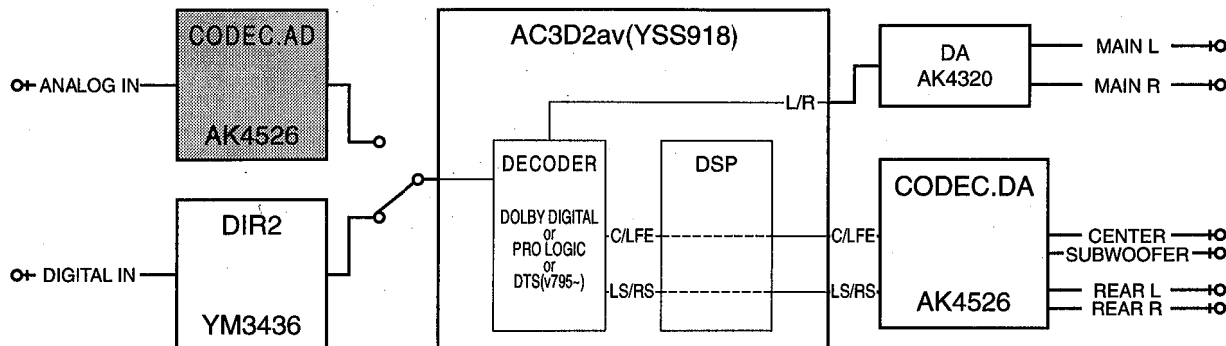

MAIN L/R are input to the DSP via AC3D2av, and then output to all channels without being processed. The head margin is abolished, and DSP outputs digital full-bit signals. Same as the above menu, except that the digital data is output to DA with full bits.

**(3) AC3/DTS THROUGH**

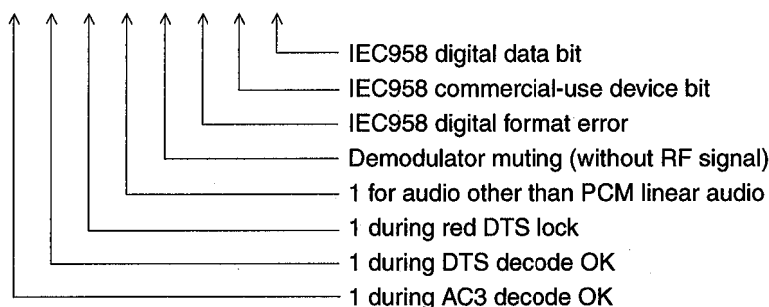

The input is digital signal only. Dolby Digital (AC-3) or DTS decoding operation is executed, according to the input source.

**1. ST:10001001**

AC3 decoded signals are output to each channel via AC3D2av.

Ac3 Status Info. : Bit 7 6 5 4 3 2 1 0  
 1 0 0 0 1 0 0 1

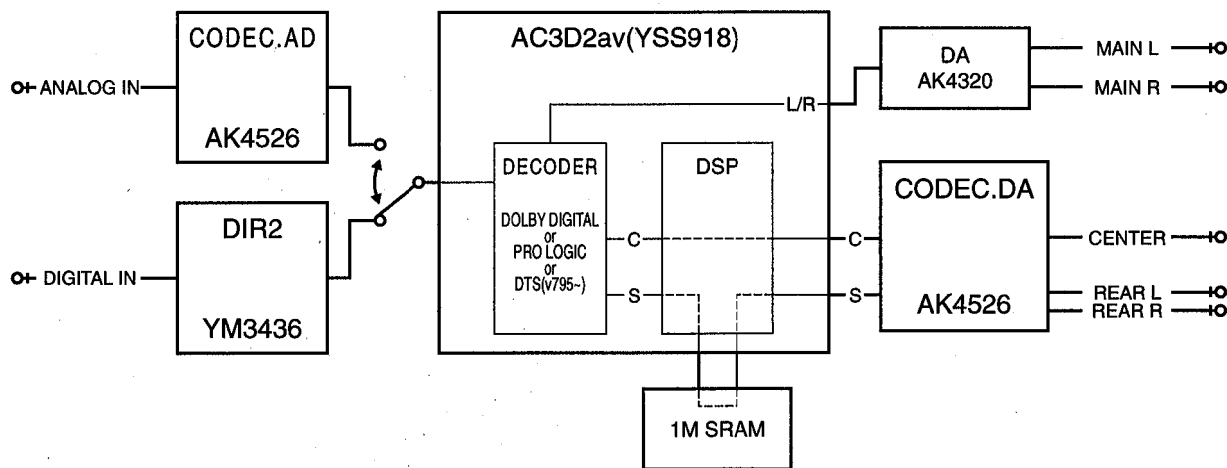

**(4) PRO LOGIC**

The input is automatically discriminated by PCM>analog. DTS is prohibited. The submenu is switched between PRO LOGIC (AUTO BALANCE OFF) and EFFECT OFF.

**1. PRO CNTR:LRG**

The input is automatically detected whether it is RF, PCM or analog. With analog, PCM audio or Dolby Digital (AC-3) 2/0 input, the L, R, C and S signals are prologic decoded and output. With Dolby Digital (AC-3) other than 2/0, PRO LOGIC does not operate, and Dolby Digital (AC-3) playback is executed. (Remote control code 7A-8A : DSP/3)

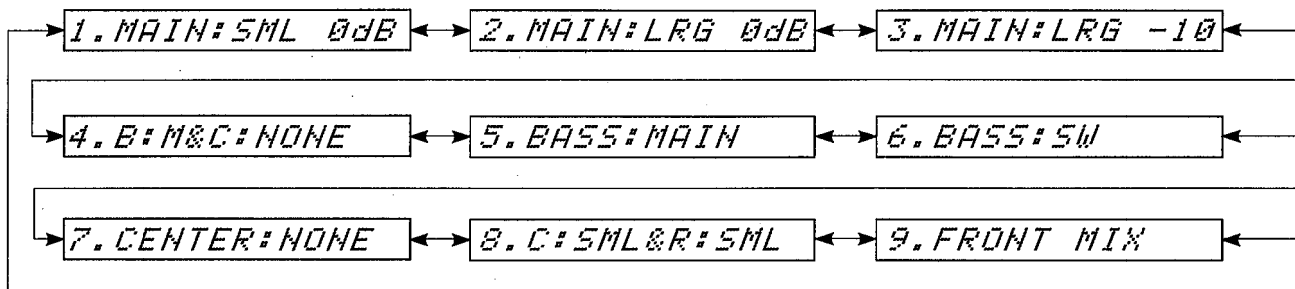

**2. PRO EFFECT:OFF**

MAIN L/R are bypassed and output.

**(5) SPEAKERS SET**

The input is automatically discriminated by AC3>DTS>PCM>analog. The L/R signals are output to the channels specified by the submenu without being processed (through).

There are the following 9 submenu items: The signal from the DSP block is normally in the effect off status for menu items 1-4. For other menu items, the same signal as in 2. DSP THROUGH: YSS918 menu is output.

The analog switches in each submenu are set as follows:

	SUB MENU	REMOTE CODE	CENTER SP	REAR SP	MAIN SP	MAIN LVL	LFE/BASS	OUTPUT
1	MAIN:SML 0dB	7A-8B	LARGE	LARGE	SMALL	0dB	SWFR	MAIN L/R

LARGE: Mode in which speakers with high bass-sound playback capability (large unit) are used. Full frequency band widths is output.

SMALL: Mode in which speakers with low bass-sound playback capability (small unit) are used. Frequencies below 90 Hz are mixed with the channel specified by LFE/BASS.

NONE: Mode in which center speaker is not used. The center audio signal is reduced by 3dB and mixed into MAIN L/R.

M : MAIN

C : CENTER

R : REAR

SWFR : SUBWOOFER

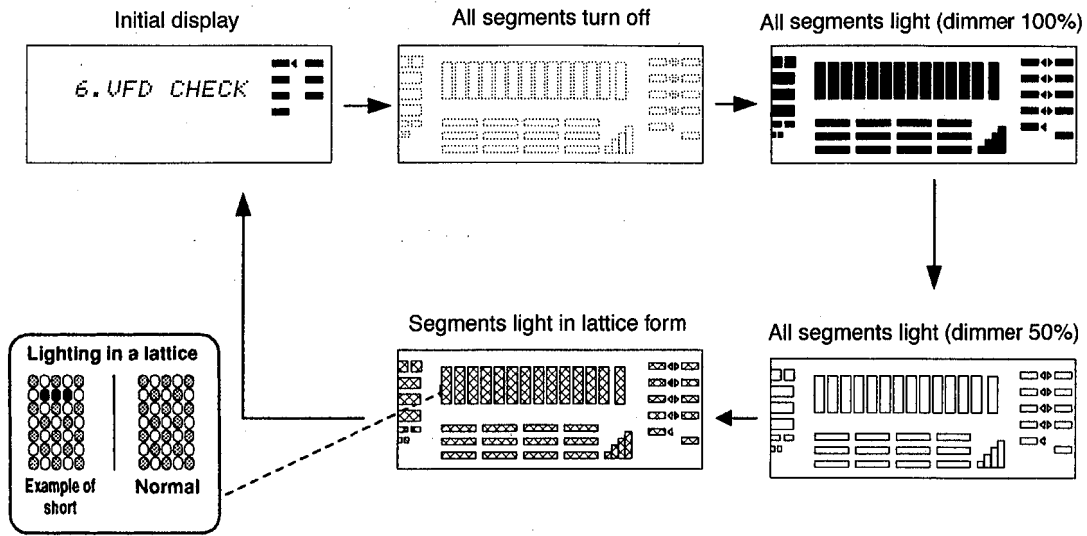

B : BASS

Output : The signal before MASTER VOLUME is indicated.

**(6) DISPLAY CHECK**

Check program for FL display. The display status will change as follows with submenu operation. The signal is processed with EFFECT OFF.  
 For switching between internal and external sync commanded by the microprocessor, the forced external sync is selected. (Remote control code 7A-56 : DSP/16)

All segments are turned on and off to detect defects in the FL driver (IC102) and FL display segments. Then the FL driver operation is checked by the dimmer control. Finally, all segments are turned on and off alternately (in lattice form), to check for a short-circuit between adjacent segments.

**(7) MANUAL TEST**

The noise generator built into the DSP outputs test noise from the channel specified by the submenu.

**(8) FACTORY PRESET**

The initialization of the backup RAM, which contains DSP sound field parameters, set menu contents, etc. is reserved or inhibited. The signal is processed with EFFECT OFF.

Inhibits initialization of the RAM. Specify this option to protect user set values.

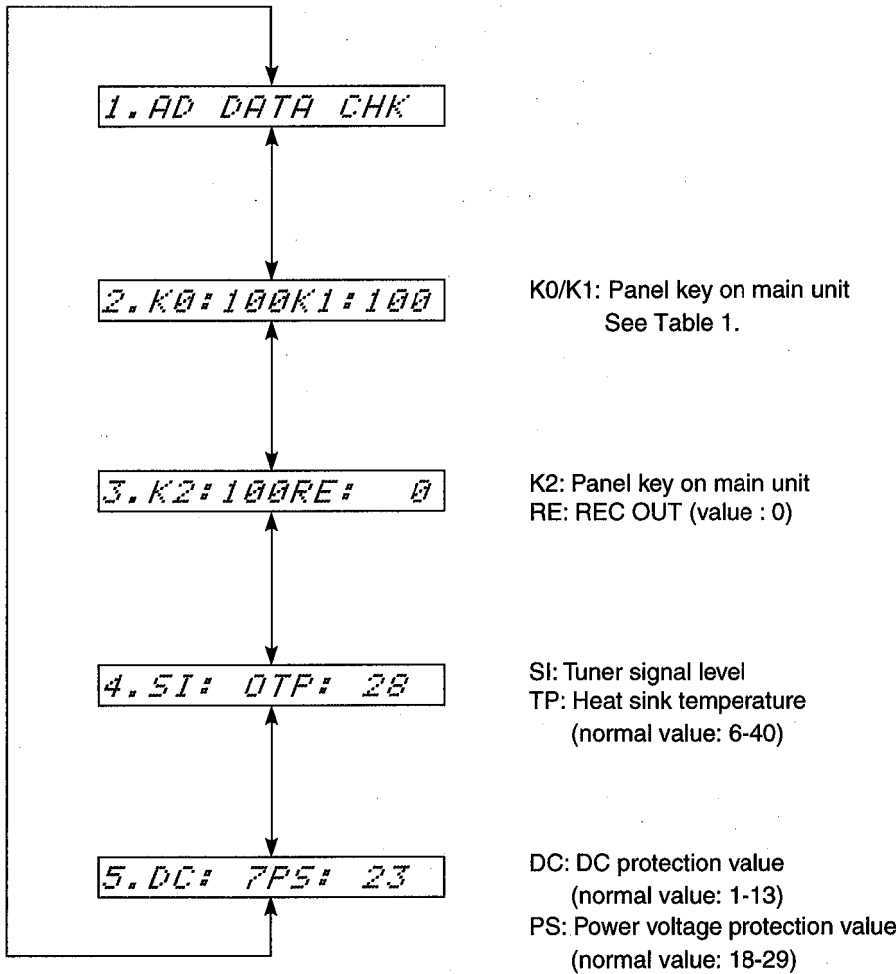

Reserve to initialize the backup RAM. (The RAM is actually initialized when power is turned on next time.) Specify this option at the factory or to reset the RAM. For each initial value, see page 20.

**CAUTION :** Before setting to the PRESET RESERVED, write down the existing preset memory content of the Tuner in a table as shown below. (This is because setting to the PRESET RESERVED will cause the user memory content to be erased.)

Preset group	P1	P2	P3	P4	P5	P6	P7	P8

**(9) AD DATA CHECK**

The A/D conversion values of the main CPU which detects key scan, protection, etc. are displayed in % (100%: 5V). All signal processing before this menu is executed will be held. The keys on the main unit cannot be operated to detect the values of all keys in the K0/K1 and K2/RE pages. Turning the rotary encoder (input selector on the main unit) will switch the submenu.

AD Value	0	10	20	30	40
K0	TUNING UP	TUNING DOWN	FM/AM	TUNING MODE	EDIT
K1	A/B/C/D/E	1	2	3	4
K2	EXT. DECODER	INPUT MODE	EFFECT	PROG >	PROG <

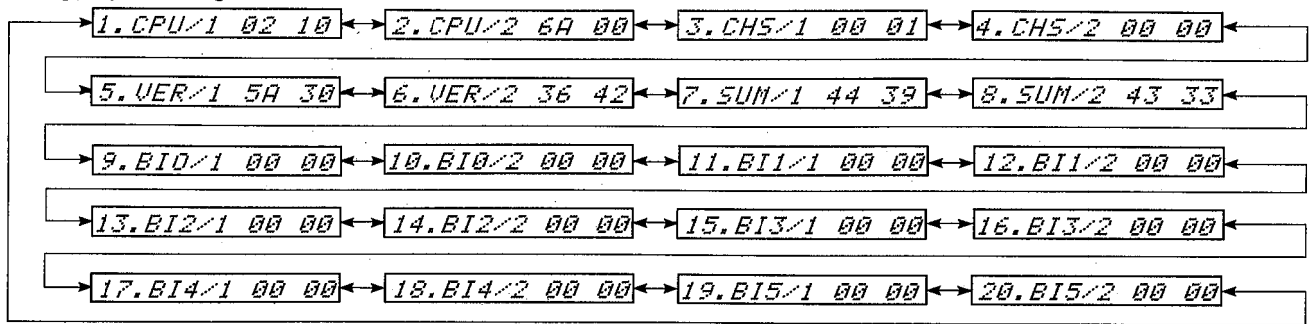

AD Value	50	60	70	80	90
K0	MEMORY	EON	RDS MODE/FREQ	PTY START	PTY MODE
K1	5	6	7	8	X
K2	+	-	SET MENU	LEVEL	X

**Caution**

1. If K0/K1/K2 are more than ±4% from the reference values, normal operation will not be executed.
2. If TP is 5% or less, the protection function will operate and power will turn off. If it is 40% or more, it is possible that there is an abnormality in the thermal detection system.
3. If DC and PS are outside the normal values, the protection function will operate and power will turn off.

**(10) STATUS FROM DSP MICOM**

The status data from the DSP microprocessor is sequentially displayed in a hexadecimal number. All signal processing before this menu is executed will be held.

**[CPU/1] <High Byte>**

**[Note]**

IEC958: Standard to identify the PCM bit stream signal. Digital format error refers to a digital signal with the sampling frequency undefined (neither 44.1k, 32k nor 48k). Since the operation of each device cannot be assured at fs outside specifications, the sub-microprocessor handles this status as the forced analog mode (ignored even if decoding is OK from the detection terminal level), and selects the signal from the analog input terminal. Since the sub-microprocessor transmits 000B (analog) for STATUS#0 bits 4-6 to the main microprocessor, the main microprocessor visually operates in the same way as with digital unlocking.

**[CPU/2] <High Byte>**

bit7	AC3 KARAOKE	bit3	On-board write mode
bit6	DIR2 LOCKN	bit2	The number of digital inputs is 2 "0"
bit5	DIR2 ERR	bit1	DSP is AC3D2 (DTS present) "1"
bit4	AC3D MUTE	bit0	RF DEM present

**<Low Byte> Always "00"**

**[CHS/1/2]** IEC958 channel status bits 00-31 available from DIR2

- <CHS/1 Hi-byte> bits 00-07
- <CHS/1 Lo-byte> bits 08-15
- <CHS/1 Hi-byte> bits 16-23
- <CHS/1 Lo-byte> bits 24-31

**[VER/1/2]** 4-byte ASCII code of sub CPU version data

**[SUM/1/2]** Displays the check sum of sub microprocessor program area with ASCII 4 bytes in a hexadecimal number.

**[BI0/1/2]** Displays the bit stream information contained in Dolby Digital (AC-3)/DTS signal from the first byte.

**[BI1-5/1/2]** Displays the bit stream information contained in Dolby Digital (AC-3) signal from the fifth byte.

**(11) CPU VERSION/CHECK SUM/PORT INFO/EXIT DIAG**

The check sum, version and port setting of main CPU/DSP CPU are displayed.

The signal is EFFECT OFF.

Operating the submenu will finish self-diagnosis, and ordinary operation mode will be restored.

The suffix letter ("A" in the following) of version indication is for compatibility of communications between the main and DSP microprocessors.

Combining microprocessors with different suffixes will make normal operation impossible.

## AMP ADJUSTMENTS

### Confirmation of Idling Current

- 1) No signal applied.
- 2) Non-loaded condition.
- 3) Aging is not necessary.

Item	Test Point	Rating (DC)	Note
MAIN L	CB529	0.05mV~1.5mV	If the measured voltage exceeds 1.6mV, cut the lead wire of R557(L ch), R565(R ch), R572(C ch), R744(RL ch) or R751(RR ch) and then check again if each measured value satisfies the rating.

CENTER	CB531		
REAR L	R761		
REAR R	R813		

\* Confirm that the voltage at the test points is 7.5mV ~ 12mV after 60 minutes.

### Note

## Superimpose

Pin No.	Symbol	Terminal name	Function
1	VSS1	Ground terminal	Connection to GND (Digital system ground terminal)
2	XTAL IN	Crystal oscillation terminal	Terminal to connect the crystal of the crystal oscillator for internal synchronous signal generation and a capacitor or to input an external clock. (2fsc or 4fsc)
3	XTAL OUT		
4	CTRL1	Crystal oscillation input switching terminal	Switching terminal between the mode to input a clock externally and the mode for crystal oscillation. [L] = Crystal oscillation, [H] = External clock input
5	BLANK	Blank output terminal	Terminal to output the blank signal (character and bordering OR signal) (MOD0 : complex synchronous signal output at [H]). When resetting (RST terminal = [L]), a crystal oscillation clock is output (but not when resetting by the command).
6	OSC IN	LC oscillation terminal	Terminal to connect the coil of the oscillator for character output dot clock generation and a capacitor.
7	OSC OUT		
8	CHARA	Character output terminal	Terminal to output a character signal (MOD0 : It becomes an output terminal to judge the external synchronous signal at [H] and outputs the result after judging existence of the external synchronous signal. When a synchronous signal exists, [H] is output.) When resetting (RST terminal = [L]), a dot clock (LC oscillation) is output (but it is not output when reset by the command.)
9	/CS	Enable input terminal	Serial data input enable input terminal. The serial data input becomes enable at [L]. A pull-up resistor is built in (hysteresis input).
10	SCLK	Clock input terminal	Input terminal of clock for serial data input. A pull-up resistor is built in (hysteresis input).
11	SIN	Data input terminal	Serial data input terminal. A pull-up resistor is built in (hysteresis input).
12	VDD2	Power supply terminal	Power supply terminal for complex image signal level adjustment (Power supply for analog system)
13	CV OUT	Video signal output terminal	Output terminal for complex image signal.
14	NC		Connected to GND or unconnected.
15	CV IN	Video signal input terminal	Input terminal for complex image signal.
16	VDD1	Power supply terminal	Power supply terminal (+5V : power supply for digital system)
17	SYN IN	Synchronous separation circuit input terminal	Video signal input terminal of the built-in synchronous separation circuit (When the built-in synchronous separation circuit is not used, it becomes a horizontal synchronous signal input or a complex synchronous signal input.)
18	SEP C	Synchronous separation circuit bias voltage terminal	Terminal to monitor built-in synchronous separation circuit bias voltage.
19	SEP OUT	Complex synchronous signal output terminal	Terminal to output a complex synchronous signal of built-in synchronous separation circuit ([H] when internally synchronized at MOD1 : [H], [L] output when externally synchronized) (When the built-in synchronous separation circuit is not used, SYNIN input signal is output.)
20	SEP IN	Vertical synchronous signal input terminal	Terminal to input a vertical synchronous signal by integrating the output signal of SEPOUT terminal. Connect the integration circuit between SEPOUT terminals. Fix it to VDD1 when not used.
21	CTRL2	NTSC/PAL-M switching input terminal	Pin setting has a priority over switching of NTSC/PAL/PAL-M/PAL-N method. The NTSC method is selected after [L]= reset. NTSC/PAL/PAL-M/PAL-N method setting by a command is effective. [H] = PAL-M method.
22	CTRL3	SEPIN input control terminal	Terminal to control whether or not to input VSYNC signal into SEPIN input terminal. [L] = VSYNC inputted, [H] = VSYNC not inputted.
23	/RST	Reset input terminal	System reset input terminal. A pull-up resistor is built in (hysteresis input).
24	VDD1	Power supply terminal (+5V)	Power supply terminal (+5V : power supply for digital system)
