SERVICE MANUAL

IMPORTANT NOTICE

This manual has been provided for the use of authorized Yamaha Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically Yamaha Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components and failure of the product to perform as specified. For these reasons, we advise all Yamaha product owners that all service required should be performed by an authorized Yamaha Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification, recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

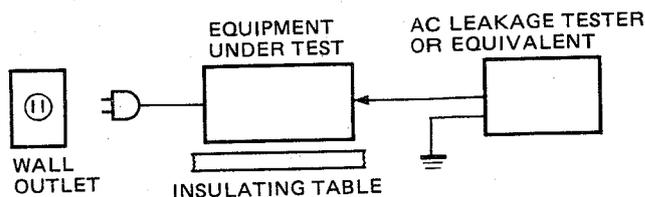

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of Yamaha are continually striving to improve Yamaha products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

1. **Critical Components Information.**
Components having special characteristics are marked and must be replaced with parts having specifications equal to those originally installed.
2. **Leakage Current Measurement (For 120V Model Only).**
When service has been completed, it is imperative that you verify that all exposed conductive surfaces are properly insulated from supply circuits.
 - Meter impedance should be equivalent to 1500 ohm shunted by 0.15μF.
 - Leakage current must not exceed 0.5mA.
 - Be sure to test for leakage with the AC plug in both polarities.

- **POLARIZATION (U model only)**
This amplifier product is equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature.

■ DISASSEMBLY PROCEDURES (Remove parts in disassembly order as numbered)

1. Removal of Top Cover

Remove 7 screws (①) in Fig.1 and slide the Top Cover back and up.

2. Removal of Front Panel

Remove 3 screws (②) and 4 hooks in Fig.1, and pull the Front Panel forward.

3. Check of Main Circuit Board (1) and replacement of parts.

a. Remove 12 screws (③) in Fig.1.

b. Remove the Main Chassis as shown in Fig.2.

In this condition it is possible for you to check the Main circuit Board (1), and replace the parts.

■ ADJUSTMENTS

1. Before adjustment

- 1) After the power switch is pushed on, wait for 5 minutes before measuring, to be sure of the most stable operation.
- 2) Adjust the OSC coil and IFT with a nonferrous screw driver.
- 3) Set the switches to the following positions.
RECEIVING MODE.....AUTO
TUNING MODE.....AUTO
- 4) Proceed with the AM section adjustments after having finished the FM section adjustment.
- 5) $0\text{dB}\mu = 1\mu\text{V}$ Ex.: $60\text{dB}\mu = 1\text{mV}$

2. Measuring instruments abbreviation

● IDLING CURRENT ADJUSTMENT

When replacing the power and drive transistors, adjust idling current. After the power has been turned on, age about 5 minutes in non loaded condition. Adjust VR3(Lch) and VR4(Rch) so that the voltage across the terminals of R189(or R191) and R190(or R192) come to 8mV ~15mV DC.

*After the power has been turned on, age about 5 minutes to obtain 2 to 3mV.

Check to make sure that the output voltage is as given below.

	Test points	Adjustment point	Rating
Lch	Across the terminals of R189(or R191)	VR3	6mV~15mV DC
Rch	Across the terminals of R190(or R192)	VR4	6mV~15mV DC

<FM TUNER SECTION>

- Use 19kHz L.P.F. to measure the RECOU
- 100% modulation means that the Frequency Deviation is 75kHz. (R.U.C.A.B)
- For the G model, Frequency Deviation is 40kHz.
- For the G,B models. install the Matching Transformer and connect FM SG.

- On step 1 and 2 connect the auxiliary center meter (Ji00036 or similar) to confirm the best tuned point.
- Shorting IC4(49pin) and GND while set at FM will result in automatic memory of each preset from P1/P9 to P8/P16 as given in the under table. This is convenient when making an adjustment.

■ WARNING

- Components having special characteristics are marked  and must be replaced with parts having specifications equal to those originally installed.
- Carbon resistors 1/6 W are not included in the ELECTRICAL PARTS list. For the parts No. of the carbon resistor, refer to the last Page.
